(54) Title: DIPEPTIDYL PEPTIDASE INHIBITORS

(57) Abstract: The present invention relates to novel inhibitors of serine type peptidases in general and of serine type dipeptidyl peptidases in particular. The present invention further relates to the use of the dipeptidyl peptidase inhibitors for selective inhibition of dipeptidyl peptidases. The present invention also relates to pharmaceutical compositions comprising these novel dipeptidyl peptidase inhibitors. The present invention further relates to the use of the novel inhibitors in therapy, diagnosis and research.

Dipeptidyl peptidase inhibitors

Field of the invention

5 The present invention relates to novel inhibitors of serine type peptidases in general and of serine type dipeptidyl peptidases in particular. The present invention further relates to the use of the dipeptidyl peptidase inhibitors for selective inhibition of serine type peptidases. The present invention also relates to pharmaceutical compositions comprising these novel dipeptidyl peptidase inhibitors. The present invention further relates to the use of the novel inhibitors in therapy, diagnosis and research.

10

Background of the invention

Serine type proteases serve an important role in human physiology by mediating the activation of vital functions. In addition to their normal physiological function, serine proteases have been implicated in a number of pathological conditions in humans. Serine proteases are characterized by a catalytic triad consisting of aspartic acid, histidine and serine at the active site.

15

Serine peptidases like granzymes, mast cell tryptase, elastases, trypsin-like enzymes, prolyl oligopeptidase, and serine type dipeptidyl peptidases such as DPPII, DPPIV, QPP, FAP α , DPP8 and DPP9 are involved in various processes that take place in the body, such as blood coagulation, inflammation, immune response, and control of peptide hormone metabolism in general.

20

Dipeptidyl peptidases (DPPs, EC 3.4.14) have been identified in various mammalian tissues and catalyze the sequential release of dipeptides from peptides. Among these enzymes, DPP II (EC 3.4.14.2) and DPP IV (EC 3.4.14.5) preferentially release N-terminal dipeptide moieties (Xaa-Pro- or Xaa-Ala-) from some oligopeptides or proteins. Although DPP IV and DPP II share substrate specificity, they can be functionally and biochemically distinguished.

25

30 Dipeptidyl peptidase IV is a highly specific exopeptidase with a serine type mechanism of peptidase activity, cleaving off dipeptides from the amino-terminus of peptides with proline or alanine at the penultimate position. In addition the slow release of dipeptides of the type X-Gly or X-Ser is reported for some naturally occurring peptides. DPP IV is constitutively expressed on epithelial and endothelial cells of a variety of different tissues, and is also found

CONFIRMATION COPY

in body fluids. In the hematopoietic system, DPP IV was identified as the leukocyte antigen CD26.

5 DPP II, first identified by McDonald et al. (*S. J. Biol. Chem.*, 1968, 243, 4143-4150), is believed to be involved in the physiological breakdown of some proline-containing oligopeptides and neuropeptides and in the degradation of collagen (*Andersen et al. Renal Physiol. Biochem.*, 1989, 12, 32-40) together with tripeptidyl peptidase and in lysosomal degradation and protein turnover. DPP II is generally localized in lysosomes and is found in a number of mammalian tissues and body fluids. The order of expression of DPP-II is kidney > 10 > testis > or = heart > brain > or = lung > spleen > skeletal muscle > or = liver (*Araki H et al., J Biochem (Tokyo) 2001, 129:27988*).

Dipeptidyl peptidase II and quiescent cell proline dipeptidase QPP have recently been suggested to be identical proteases based on sequence comparison of human quiescent cell 15 proline peptidase and rat DPPII. Additional biochemical evidence is provided by Leitung (*Biochem. J. on line*, 2002, 1643).

It is a general object of the present invention to provide novel serine type peptidase inhibitors in general and dipeptidyl peptidase inhibitors in particular, with recognized utility and 20 exhibiting relatively high activity at relatively low concentrations, which can be exploited in medical applications. The invention also aims to provide novel inhibitors that have a more specific and selective DPP inhibitory activity than currently available inhibitors. These and other objects and advantages of the present invention will be recognized by those skilled in the art from the following description and illustrative examples.

25

Summary

According to a first aspect, the invention provides compounds according to claim 1, which are able to inhibit the enzymatic activity of serine type dipeptidyl peptidases such as DPPII, DPPIV, DPP8, DPP9, FAB α and QPP. Such compounds according to the present invention 30 induce strong inhibition of dipeptidyl peptidase enzyme activity. The present novel dipeptidyl peptidase inhibitors are therefore very suitable for use in all kinds of research, therapeutic and diagnostic applications as described below.

The present invention further relates in another aspect to the use of said compounds as a medicament. In addition, the invention concerns the use of said compounds in the treatment of diseases associated with excessive, impaired or unbalanced activity of a serine type dipeptidyl peptidase, or in diagnostic and research methods. The present invention further
5 relates to the use of the compounds in the preparation of a medicament for inhibiting the activity of a serine type dipeptidyl peptidase and in the preparation of a medicament for treating diseases associated with excessive, impaired or unbalanced activity of a serine type dipeptidyl peptidase. The present invention also relates to the use of the compounds in diagnostic and research methods.

10

In addition, the present invention also relates to pharmaceutical compositions and kits comprising the compounds according to the invention.

15

In a further aspect, the present invention relates to methods for inhibiting the activity of a serine type dipeptidyl peptidase *in vitro*, *ex vivo* and *in vivo*.

The present invention also relates to method for purifying and synthesizing the present compounds.

Detailed description of the figures

Figure 1 illustrates the synthesis of compounds having formulas IV, IX, XI, XII, XIII, XIV, XV, XVI and XXI as illustrated in example 2, Table B.

Figure 2 illustrates the synthesis of compounds having formulas XVIII, XVII, XX as illustrated in example 2, Table B.

25

Figure 3 illustrates the synthesis of compounds having formulas V, VI, VII, VIII, X, XIX as illustrated in example 2, Table B.

Figure 4 illustrates the synthesis of compounds having formulas XXII, XXIII, XXIV, XXV, XXVI, XXVII, XXVIII, XXIX, XXX, XXXI, XXXII, XXXIII, XXXIV as illustrated in example 2, Table B.

30

Figure 5 illustrates the synthesis of compounds having formulas XXXV and XXXVI as illustrated in example 2, Table B.

Figure 6 illustrates the synthesis of compounds having formulas XXXVII to XXXXI as illustrated in example 2, Table B.

Figure 7 illustrates the synthesis of compounds having formulas XXXXII to XXXXVII as illustrated in example 2, Table B.

Detailed description of the invention

- 5 The present invention relates to novel inhibitors of serine type dipeptidyl peptidases such as DPPII, DPPIV, DPP8, DPP9, FAB α and QPP.

As used herein the terms "serine type dipeptidyl peptidase" or "dipeptidyl peptidases" or "DPP" are used as synonyms and refer to serine type dipeptidyl peptidases such as DPPII,
 10 DPPIV, DPP8, DPP9, FAB α and QPP.

In this application the terms "modulator", "inhibitor", "compound" and "modulating compound" are used interchangeably. These terms as used herein refer to compounds according to the invention having an modulating activity on DPP, which may mostly comprise inhibiting
 15 properties in various degrees going from very inhibiting to weakly inhibiting. Although the compounds will mostly have inhibiting properties, it is also within the scope of the invention that the present compounds may have in some situations enhancing properties.

In a first embodiment, the present invention relates a compound having a modulating activity
 20 on a serine type dipeptidyl peptidase, having the general formula I, or pharmaceutically acceptable salts, solvates or functional derivatives thereof.

formula I

- wherein R¹ is selected from the group comprising -CH₂-, oxa, thia and imino, or
 25 wherein R¹ participates to a double bond between the carbon atoms in position 1 and 2,
 wherein R² is selected from the group comprising hydrogen, alkyl or cyano,
 wherein R³, R⁴ and R⁶ are selected from the group comprising hydrogen, oxyalkyl,
 alkyl, alkyloxy, alkyloxyalkyl, alkylthioalkyl, alkylamino, aminoalkyl, alkoxycarbonyl,
 alkylthiocarbonyl, alkanoyl, aminoalkanoyl, aminocarbonyl, hydroxyalkyl, cycloalkyl,
 30 cycloalkylalkyl, cycloalkylcarbonyl, cycloalkylalkanoyl, cycloalkylthiocarbonyl,

cycloalkylalkoxycarbonyl, cycloalkylalkoxythiocarbonyl, cycloalkylthioalkyl,
 alkylcarbonyloxyalkyl, cycloalkylcarbonyloxyalkyl, alkylaminocarbonyl, alkylaminoalkyl, aryl,
 arylaminoalkoxy, arylamino, aminoaryl, aminoaralkyl, arylaminoalkyl, arylaminoalkylamino,
 aryloxy, aryloxyalkoxy, aryloxyalkyl, aryloxyalkylamino, aralkyl, aralkoxy, aralkylamino,
 5 aralkanoyl, aroyl, arylcarbonyl, aryloxy carbonyl, arylthiocarbonyl, aralkoxycarbonyl,
 arylalkylthiocarbonyl, aryloxyalkyl, arylthioalkyl, haloalkyl, aryloxy carbonylalkyl,

 Het²arylcarbonyl, Het²aryloxycarbonyl, Het²arylthiocarbonyl, Het²aralkoxycarbonyl,
 15 Het²arylalkylthiocarbonyl, Het²aryloxyalkyl, Het²arylthioalkyl, Het²haloalkyl,
 Het²aryloxycarbonylalkyl, Het²aryloxyalkanoyl, Het²aralkylcarbonyloxyalkyl,
 Het²arylaminocarbonyl, Het²aralkylaminocarbonyl, Het²alkylaminoalkyl, Het²aralkylaminoalkyl,
 Het²alkanoylaminoalkyl, Het²aroylaminoalkyl, Het²aralkanoylaminoalkyl,
 Het²alkyloxycarbonylaminoalkyl, Het²aryloxycarbonylaminoalkyl,
 20 Het²aralkoxycarbonylaminoalkyl, Het²alkylaminocarbonylaminoalkyl,
 Het²arylaminocarbonylaminoalkyl, Het²aralkylaminocarbonylaminoalkyl, Het²alkylaminoaryl,
 Het²arylaminoaryl, Het²aralkylaminoaryl, Het²alkanoylaminoaryl, Het²aroylaminoaryl,
 Het²aralkanoylaminoaryl, Het²alkyloxycarbonylaminoaryl, Het²aryloxycarbonylaminoaryl,
 Het²aralkoxycarbonylaminoaryl, Het²alkylaminocarbonylaminoaryl,
 25 Het²arylaminocarbonylaminoaryl, Het²aralkylaminocarbonylaminoaryl, Het²alkylaminoaralkyl,
 Het²arylaminoaralkyl, Het²aralkylaminoaralkyl, Het²alkanoylaminoaralkyl,
 Het²aroylaminoaralkyl, Het²aralkanoylaminoaralkyl, Het²alkyloxycarbonylaminoaralkyl,
 Het²aryloxycarbonylaminoaralkyl, Het²aralkoxycarbonylaminoaralkyl,
 Het²alkylaminocarbonylaminoaralkyl, Het²arylaminocarbonylaminoaralkyl,
 30 Het²aralkylaminocarbonylaminoaralkyl,

wherein R³, R⁴ and R⁵ are optionally substituted by one or more substituents independently selected from the group comprising hydrogen, amino, hydroxy, halogen, alkyl, alkylamino, alkanoyl, hydroxyalkyl, cycloalkyl, cycloalkylalkyl, aryl, aralkyl, aminoaryl,

arylaminoalkyl, arylaminoalkylamino, aralkanoyl, aroyl, piperazinyl, piperidinyl, pyrrolidinyl, imidazolidinyl, morpholinyl, amidino, acetyl, Het¹ and Het²;

wherein R⁶ is oxo or thio, and

wherein R⁷ is selected from the group comprising hydrogen, alkyl and halogen.

5

According to the present invention, it was then found that all of the compounds of formula I claimed in claim 1 and their corresponding pharmaceutically acceptable salts are useful in inhibiting serine type dipeptidyl peptidases and are potent modulators, in particular inhibitors, of DPPII in particular. Specific members of the cited R groups will be listed below.

10

The highly specific and potent inhibitors of serine type dipeptidyl peptidases, according to the present invention, can advantageously be used to unravel of the physiological functions of the serine type dipeptidyl peptidase enzyme and are also very useful to differentiate between different serine type dipeptidyl peptidases activity in biological systems.

15

The term "alkyl", alone or in combination, means straight and branched chained saturated hydrocarbon radicals containing from 1 to 10 carbon atoms, preferably from 1 to 8 carbon atoms, more preferably 1 to 6 carbon atoms. Examples of such radicals include but are not limited to methyl, ethyl, n-propyl, isopropyl, n-butyl, isobutyl, sec-butyl, tert-butyl, 2-methylbutyl, pentyl, iso-amyl, hexyl, 3-methylpentyl, octyl and the like.

20

The term "cycloalkyl" alone or in combination, means a saturated or partially saturated monocyclic, bicyclic or polycyclic alkyl radical wherein each cyclic moiety contains from about 3 to about 8 carbon atoms, more preferably from about 3 to about 7 carbon atoms. Examples of monocyclic cycloalkyl radicals include cyclopropyl, cyclobutyl, cyclopentyl, cyclohexyl, cycloheptyl, cyclooctyl and the like. Examples of polycyclic cycloalkyl radicals include decahydronaphthyl, bicyclo [5.4.0] undecyl, adamantyl, and the like.

25

The term "cycloalkylalkyl" means an alkyl radical as defined herein, in which at least one hydrogen atom on the alkyl radical is replaced by a cycloalkyl radical as defined herein. Examples of such cycloalkylalkyl radicals include cyclopropylmethyl, cyclobutylmethyl, cyclopentylmethyl, cyclohexylmethyl, 1-cyclopentylethyl, 1-cyclohexylethyl, 2-cyclopentylethyl, 2-cyclohexylethyl, cyclobutylpropyl, cyclopentylpropyl, 3-cyclopentylbutyl, cyclohexylbutyl and the like.

30

The term "alkoxy" or "alkyloxy", alone or in combination, means an alkyl ether radical wherein the term alkyl is as defined above. Examples of suitable alkyl ether radicals include methoxy, ethoxy, n-propoxy, isopropoxy, n-butoxy, iso-butoxy, sec-butoxy, tert-butoxy, hexanoxy and the like.

5

The term "alkanoyl" or "alkylcarbonyl", alone or in combination, means an acyl radical derived from an alkanecarboxylic acid, examples of which include acetyl, propionyl, butyryl, valeryl, 4-methylvaleryl, and the like.

10

The term "alkylamino", alone or in combination, means an alkyl amine radical (i.e. $\text{RNH}\cdot$), wherein the term "alkyl" is defined as above. Examples of alkylamino radicals include methylamino (NHCH_3), ethylamino (NHCH_2CH_3), n-propylamino, isopropylamino, n-butylamino, isobutylamino, sec-butylamino, tert-butylamino, n-hexylamino, and the like.

15

The term "aminoalkyl", alone or in combination, means an amine alkyl radical (i.e. $\text{NH}_2\text{R}\cdot$), wherein the term "alkyl" is defined as above.

The term "aminoalkanoyl" means an acyl group derived from an amino-substituted alkylcarboxylic acid wherein the amino group can be a primary, secondary or tertiary amino group containing substituents selected from alkyl, aryl, aralkyl, cycloalkyl, cycloalkylalkyl radicals and the like.

20

The term "aminocarbonyl" alone or in combination, means an amino-substituted carbonyl (carbamoyl) group wherein the amino group can be a primary, secondary or tertiary amino group containing substituents selected from alkyl, aryl, aralkyl, cycloalkyl, cycloalkylalkyl radicals and the like.

25

The term "aryl" alone or in combination, is meant to include phenyl and naphthyl which both may be optionally substituted with one or more substituents independently selected from alkyl, alkoxy, halogen, hydroxy, amino, nitro, cyano, haloalkyl, carboxy, alkoxycarbonyl, cycloalkyl, Het¹, amido, optionally mono- or disubstituted aminocarbonyl, methylthio, methylsulfonyl, and phenyl optionally substituted with one or more substituents selected from C_{1-6} alkyl, C_{1-6} alkyloxy, halogen, hydroxy, optionally mono- or disubstituted amino, nitro,

30

cyano, haloC₁₋₆alkyl, carboxyl, C₁₋₆alkoxycarbonyl, C₃₋₇cycloalkyl, Het¹, optionally mono- or disubstituted aminocarbonyl, methylthio and methylsulfonyl; whereby the optional substituents on any amino function are independently selected from alkyl, alkyloxy, Het¹, Het¹alkyl, Het¹alkyl, Het¹oxy, Het¹oxyalkyl, phenyl, phenoxy, phenoxyalkyl, phenylalkyl, 5 alkyloxycarbonylamino, amino, and aminoalkyl whereby each of the amino groups may optionally be mono- or where possible di-substituted with alkyl. Examples of aryl includes phenyl, p-tolyl, 4-methoxyphenyl, 4-(tert-butoxy)phenyl, 3-methyl-4-methoxyphenyl, 4-fluorophenyl, 4-chlorophenyl, 3-nitrophenyl, 3-aminophenyl, 3-acetamidophenyl, 4-acetamidophenyl, 2-methyl-3-acetamidophenyl, 2-methyl-3-aminophenyl, 3-methyl-4-aminophenyl, 2-amino-3-methylphenyl, 2,4-dimethyl-3-aminophenyl, 4-hydroxyphenyl, 3-methyl-4-hydroxyphenyl, 1-naphthyl, 2-naphthyl, 3-amino-1-naphthyl, 2-methyl-3-amino-1-naphthyl, 6-amino-2-naphthyl, 4,6-dimethoxy-2-naphthyl and the like.

As used herein, the term "halogen" as a group or part of a group is generic for fluoro, chloro, 15 bromo or iodo.

The term "haloalkyl" alone or in combination, means an alkyl radical having the meaning as defined above wherein one or more hydrogens are replaced with a halogen, preferably, chloro or fluoro atoms, more preferably fluoro atoms. Examples of such haloalkyl radicals 20 include chloromethyl, 1-bromoethyl, fluoromethyl, difluoromethyl, trifluoromethyl, 1,1,1-trifluoroethyl and the like.

The term "Het¹" alone or in combination, is defined as a saturated or partially unsaturated monocyclic, bicyclic or polycyclic heterocycle having preferably 3 to 12 ring members, more 25 preferably 5 to 10 ring members and more preferably 5 to 6 ring members, which contains one or more heteroatom ring members selected from nitrogen, oxygen or sulfur and which is optionally substituted on one or more carbon atoms by alkyl, alkyloxy, halogen, hydroxy, oxo, optionally mono- or disubstituted amino, nitro, cyano, haloalkyl, carboxyl, alkoxycarbonyl, cycloalkyl, optionally mono- or disubstituted aminocarbonyl, methylthio, methylsulfonyl, aryl 30 and a saturated or partially unsaturated monocyclic, bicyclic or tricyclic heterocycle having 3 to 12 ring members which contains one or more heteroatom ring members selected from nitrogen, oxygen or sulfur and whereby the optional substituents on any amino function are independently selected from alkyl, alkyloxy, Het², Het²alkyl, Het²oxy, Het²oxyalkyl, aryl,

aryloxy, aryloxyalkyl, aralkyl, alkyloxy-carbonylamino, amino, and aminoalkyl whereby each of the amino groups may optionally be mono- or where possible di-substituted with alkyl.

The term "Het^{2a}" as a group or part of a group is defined as an aromatic monocyclic, bicyclic or tricyclic heterocycle having preferably 3 to 12 ring members, more preferably 5 to 10 ring members and more preferably 5 to 6 ring members, which contains one or more heteroatom ring members selected from nitrogen, oxygen or sulfur and which is optionally substituted on one or more carbon atoms by alkyl, alkyloxy, halogen, hydroxy, optionally mono- or disubstituted amino, nitro, cyano, haloalkyl, carboxyl, alkoxy-carbonyl, cycloalkyl, optionally mono- or disubstituted aminocarbonyl, methylthio, methylsulfonyl, aryl, Het¹ and an aromatic monocyclic, bicyclic or tricyclic heterocycle having 3 to 12 ring members; whereby the optional substituents on any amino function are independently selected from alkyl, alkyloxy, Het¹, Het¹alkyl, Het¹oxy, Het¹oxyalkyl, aryl, aryloxy, aryloxyalkyl, aralkyl, alkyloxy-carbonylamino, amino, and aminoalkyl whereby each of the amino groups may optionally be mono- or where possible di-substituted with alkyl.

The term "arylamino" alone or in combination means an aryl amine radical, wherein the term "aryl" is defined as above.

The term "aralkyl" alone or in combination, means an alkyl as defined herein, wherein an alkyl hydrogen atom is replaced by an aryl as defined herein. Examples of aralkyl radicals include benzyl, phenethyl, dibenzylmethyl, methylphenylmethyl, 3- (2-naphthyl)-butyl, and the like.

The term "aralkanoyl" means an acyl radical derived from an aryl-substituted alkanecarboxylic acid such as phenylacetyl, 3-phenylpropionyl (hydrocinnamoyl), 4-phenylbutyryl, (2-naphthyl)acetyl, 4-chlorohydrocinnamoyl, 4-aminohydrocinnamoyl, 4-methoxyhydrocinnamoyl, and the like.

The term "aralkoxy" means alkoxy as defined herein, wherein an alkyl hydrogen atom is replaced by an aryl as defined herein. Examples of aralkoxy radicals include 2-phenylethoxy, 2-phenyl-1-propoxy, and the like.

The term "aralkylamino" means alkylamino as defined herein, wherein an alkyl hydrogen atom is replaced by an aryl as defined herein. Examples of aralkylamino radicals include 2-phenethylamino, 4-phenyl-n-butylamino, and the like.

- 5 The term "aroyl" means an acyl radical derived from an arylcarboxylic acid, aryl having the meaning given above. Examples of such arylcarboxylic acid radicals include substituted and unsubstituted benzoic or naphthoic acid such as benzoyl, 4-chlorobenzoyl, 4-carboxybenzoyl, 4-(benzyloxycarbonyl)benzoyl, 1-naphthoyl, 2-naphthoyl, 6-carboxy-2 naphthoyl, 6-(benzyloxycarbonyl)-2-naphthoyl, 3-benzyloxy-2-naphthoyl, 3-hydroxy-2-naphthoyl, 3-
10 (benzyloxyformamido)-2-naphthoyl, and the like.

The term "arylaminoalkoxy" means alkoxy as defined herein, wherein an alkyl hydrogen atom is replaced by an arylamino as defined herein. Examples of (arylamino) alkoxy radicals include 2-(phenylamino)-ethoxy, 2-(2-naphthylamino)-1-butoxy, and the like.

- 15 The term "arylaminoalkyl" means alkyl as defined herein, wherein an alkyl hydrogen atom is replaced by an arylamino as defined herein. Examples of arylaminoalkyl radicals include phenylaminoethyl, 4-(3-methoxyphenylamino)-1-butyl, and the like.

- 20 The term "arylaminoalkylamino" means alkylamino as defined herein, wherein an alkyl hydrogen atom is replaced by an arylamino as defined herein. Examples of (arylamino) alkylamino radicals include 3-(naphthylamino)-propylamino, 4-(phenylamino)-1-butylamino, and the like.

- 25 The term "aryloxy" means a radical of the formula aryl-O- in which the term aryl has the significance given above.

The term "aryloxyalkanoyl" means an acyl radical of the formula aryl-O-alkanoyl wherein aryl and alkanoyl have the meaning given above.

- 30 The term "aryloxyalkoxy" means alkoxy as defined herein, wherein an alkyl hydrogen atom is replaced by an aryloxy as defined herein. Examples of (aryloxy) alkoxy radicals include 2-phenoxyethoxy, 4-(3-aminophenoxy)-1-butoxy, and the like.

The term "Het²alkylthio" means alkylthio as defined herein, wherein an alkyl hydrogen atom is replaced by a Het² as defined herein. Examples of Het²alkylthio radicals include 3-pyridylmethylthio, 3 (4-thiazolyl)-propylthio, and the like.

- 5 The term "Het²amino" means Het² as defined herein, wherein a hydrogen atom on the Het² ring is replaced by a nitrogen. Het²amino radicals include, for example, 4-thiazolylamino, 2-pyridylamino, and the like.

- 10 The term "Het²oxy" means Het² as defined herein, wherein a hydrogen atom on the Het² ring is replaced by an oxygen. Het²oxy radicals include, for example, 4-pyridyloxy, 5-quinolyloxy, and the like.

The term "Het²oxycarbonyl" means an acyl radical derived from a carbonic acid represented by Het²-O-COOH wherein Het² has the meaning given above.

- 15 The term "Het¹alkanoyl" is an acyl radical derived from a Het¹-substituted alkylcarboxylic acid wherein Het¹ has the meaning given above.

- 20 The term "Het¹alkoxycarbonyl" means an acyl group derived from Het¹-O-COOH wherein Het¹ is as defined above.

As used herein the term "oxa" refers to the group -O-.

As used herein the term "thia" refers to the group -S-.

As used herein the term "imino" refers to the group -NH-.

- 25 As used herein the term "cyano" refers to the group -CN.

As used herein the term "amidino" refers to the group -(HN=)C-NH₂.

As used herein the term "acetyl" refers to the group -(O=)C-CH₃.

- 30 Whenever the term "substituted" is used in the present invention, it is meant to indicate that one or more hydrogens on the atom indicated in the expression using "substituted" is replaced with a selection from the indicated group, provided that the indicated atom's normal valency is not exceeded, and that the substitution results in a chemically stable compound, i.e. a compound that is sufficiently robust to survive isolation to a useful degree of purity from a reaction mixture, and formulation into a therapeutic agent.

As used herein before, the term "one or more" covers the possibility of all the available C-atoms, where appropriate, to be substituted, preferably, one, two or three. When any variable, e.g. halogen or alkyl, occurs more than one time in any constituent, each definition is independent.

Whenever used hereinafter, the term "compound(s) of the invention" or a similar term is meant to include the compounds of general formula I or formula II and any subgroup thereof. This term also refers to the compounds as depicted in Table A and B and their *N*-oxides, salts, stereoisomeric forms, racemic mixtures, pro-drugs, esters and metabolites, as well as their quaternized nitrogen analogues. The *N*-oxide forms of said compounds are meant to comprise compounds wherein one or several nitrogen atoms are oxidized to the so-called *N*-oxide. The compounds according to the invention may also exist in their tautomeric forms. Such forms, although not explicitly indicated in the compounds as described herein, are intended to be included within the scope of the present invention.

Certain of the compounds described herein contain one or more chiral centers, or may otherwise be capable of existing as multiple stereoisomers. The scope of the present invention includes pure stereoisomers as well as mixtures of stereoisomers, such as purified enantiomers/diastereomers or enantiomerically/diastereomerically enriched mixtures. Also included within the scope of the invention are the individual isomers of the compounds per se, as well as any wholly or partially equilibrated mixtures thereof. The present invention covers the individual isomers of the compounds represented by the formulas above as mixtures with isomers thereof in which one or more chiral centers are inverted.

The term "pro-drug" as used herein means the pharmacologically acceptable derivatives such as esters, amides and phosphates, such that the resulting *in vivo* biotransformation product of the derivative is the active drug. The reference by Goodman and Gilman (The Pharmacological Basis of Therapeutics, 8th Ed, McGraw-Hill, Int. Ed. 1992, "Biotransformation of Drugs", p 13-15) describing pro-drugs generally is hereby incorporated. Pro-drugs of the compounds of the invention can be prepared by modifying functional groups present in said component in such a way that the modifications are cleaved, either in routine manipulation or *in vivo*, to the parent component. Typical examples of pro-drugs are described for instance in WO 99/33795, WO 99/33815, WO 99/33793 and WO 99/33792 all

incorporated herein by reference. Pro-drugs are characterized by excellent aqueous solubility, increased bioavailability and are readily metabolized into the active inhibitors *in vivo*.

- 5 For therapeutic use, the "salts" of the compounds according to the invention, are those wherein the counterion is pharmaceutically or physiologically acceptable. The pharmaceutically acceptable salts of the analogues according to the invention, i.e. in the form of water-, oil-soluble, or dispersible products, include the conventional non-toxic salts or the quaternary ammonium salts which are formed, e.g., from inorganic or organic acids or bases.
- 10 Examples of such acid addition salts include acetate, adipate, alginate, aspartate, benzoate, benzenesulfonate, bisulfate, butyrate, citrate, camphorate, camphorsulfonate, cyclopentanepropionate, digluconate, dodecylsulfate, ethanesulfonate, fumarate, glucoheptanoate, glycerophosphate, hemisulfate, heptanoate, hexanoate, hydrochloride, hydrobromide, hydroiodide, 2-hydroxyethanesulfonate, lactate, maleate, methanesulfonate,
- 15 2-naphthalenesulfonate, nicotinate, oxalate, pamoate, pectinate, persulfate, 3-phenylpropionate, picrate, pivalate, propionate, succinate, tartrate, thiocyanate, tosylate, and undecanoate. Base salts include ammonium salts, alkali metal salts such as sodium and potassium salts, alkaline earth metal salts such as calcium and magnesium salts, salts with organic bases such as dicyclohexylamine salts, N-methyl-D-glucamine, and salts with amino
- 20 acids such as arginine, lysine, and so forth. Also, the basic nitrogen-containing groups may be quaternized with such agents as lower alkyl halides, such as methyl, ethyl, propyl, and butyl chloride, bromides and iodides; dialkyl sulfates like dimethyl, diethyl, dibutyl; and diamyl sulfates, long chain halides such as decyl, lauryl, myristyl and stearyl chlorides, bromides and iodides, aralkyl halides like benzyl and phenethyl-bromides and others. Other
- 25 pharmaceutically acceptable salts include the sulfate salt ethanolate and sulfate salts.

The "pharmaceutically acceptable esters" of the compounds according to the invention refer to non-toxic esters, preferably the alkyl esters such as methyl, ethyl, propyl, isopropyl, butyl, isobutyl, or pentyl esters, of which the methyl ester is preferred. However, other esters such

30 as phenyl-alkyl may be employed if desired.

As used herein, the term "solvate" refers to a complex of variable stoichiometry formed by a solute or a salt or pharmaceutical functional derivative thereof and a solvent. Such solvents for the purpose of the invention should not interfere with the biological activity of the solute.

Examples of solvents include, but are not limited to water, methanol, ethanol, and acetic acid. Preferably, the solvent used is a pharmaceutical acceptable solvent. Examples of pharmaceutically acceptable solvents include water, ethanol, and acetic acid.

5 The term "pharmaceutically functional derivative" refers to any pharmaceutical acceptable derivative of a compound of the present invention, for example, an ester or an amide, which upon administration to a mammal is capable of providing (directly or indirectly) a compound of the present invention or an active metabolite or residue thereof. Such derivatives are recognizable to those skilled in the art, without undue experimentation.

10 The compounds of the present invention may have the ability to crystallize in more than one form, a characteristic known as polymorphism. All polymorphic forms ("polymorphs") are within the scope of the present invention. Polymorphism generally can occur as a response to changes in temperature or pressure, or both, and can also result from variations in the crystallization process. Polymorphs can be distinguished by various physical characteristics
15 that are known in the art such as x-ray diffraction patterns, solubility, and melting point.

In a preferred embodiment, the invention relates to a compound having the general formula I, or pharmaceutically acceptable salts, solvates or functional derivatives thereof,

20 wherein R^1 is selected from the group comprising $-CH_2-$, oxa, thia and imino, or wherein R^1 participates to a double bond between the carbon atoms in position 1 and 2,

wherein R^2 is selected from the group comprising hydrogen, alkyl or cyano,

wherein R^3 and R^4 are selected from the group comprising hydrogen, alkyl, alkylamino, aminoalkyl, aminoalkanoyl, aminocarbonyl, cycloalkyl, alkylaminocarbonyl, alkylaminoalkyl, aryl, arylaminoalkoxy, arylamino, aminoaryl, aminoaralkyl, arylaminoalkyl, arylaminoalkylamino, aryloxy, aryloxyalkoxy, aryloxyalkyl, aryloxyalkylamino, aralkyl, aralkoxy, aralkylamino, aralkanoyl, aroyl, arylcarbonyl, aryloxy carbonyl, arylthiocarbonyl, aralkoxycarbonyl, arylalkylthiocarbonyl, aryloxyalkyl, arylthioalkyl, haloalkyl, aryloxy carbonylalkyl, aryloxyalkanoyl, aralkylcarbonyloxyalkyl, arylaminocarbonyl, aralkylaminocarbonyl, aralkylaminoalkyl, alkanoylaminoalkyl, aroylaminoalkyl, aralkanoylaminoalkyl, alkyl oxycarbonylaminoalkyl, aryloxy carbonylaminoalkyl, aralkoxycarbonylaminoalkyl, alkylaminocarbonylaminoalkyl, arylaminocarbonylaminoalkyl, aralkylaminocarbonylaminoalkyl, alkylaminoaryl, arylaminoaryl, aralkylaminoaryl, alkanoylaminoaryl, aroylaminoaryl, aralkanoylaminoaryl, alkyl oxycarbonylaminoaryl,

- and wherein R³ and R⁴ are optionally substituted by one or more substituents independently selected from the group comprising hydrogen, amino, hydroxy, halogen, alkyl,
 30 alkylamino, alkanoyl, hydroxyalkyl, cycloalkyl, cycloalkylalkyl, aryl, aralkyl, aminoaryl, arylaminooalkyl, arylaminooalkylamino, aralkanoyl, aroyl, piperazinyl, piperidinyl, pyrrolidinyl, imidazolidinyl, morpholinyl, amidino, acetyl, Het¹ and Het²;

wherein R⁵ is oxo or thio, wherein R⁶ is hydrogen, and wherein R⁷ is hydrogen, fluor or methyl.

In another more preferred embodiment a compound is provided having the general formula I or pharmaceutically acceptable salts, solvates or functional derivatives thereof,

wherein R^1 is selected from the group comprising $-CH_2-$, oxa, and thia or wherein R^1 participates to a double bond between the carbon atoms in position 1 and 2,

wherein R^2 is selected from the group comprising hydrogen and cyano,

wherein R^3 and R^4 are selected from the group comprising hydrogen, alkyl, aryl, cycloalkyl, aralkyl, cycloalkylalkyl, alkylamino, aminoalkyl, aminoalkanoyl, aminocarbonyl, alkylaminocarbonyl, alkylaminoalkyl, arylaminoalkoxy, arylamino, aminoaryl, aminoaralkyl, arylaminoalkyl, arylaminoalkylamino, aryloxyalkylamino, aralkylamino, arylaminocarbonyl, aralkylaminocarbonyl, aralkylaminoalkyl, alkanoylaminoalkyl, aroylaminoalkyl, aralkanoylaminoalkyl, alkylloxycarbonylaminoalkyl, aryloxycarbonylaminoalkyl, aralkoxycarbonylaminoalkyl, alkylaminocarbonylaminoalkyl, arylaminocarbonylaminoalkyl, aralkylaminocarbonylaminoalkyl, alkylaminoaryl, arylaminoaryl, aralkylaminoaryl, alkanoylaminoaryl, aroylaminoaryl, aralkanoylaminoaryl, alkylloxycarbonylaminoaryl, aryloxycarbonylaminoaryl, aralkoxycarbonylaminoaryl, alkylaminocarbonylaminoaryl, arylaminocarbonylaminoaryl, aralkylaminocarbonylaminoaryl, alkylaminoaralkyl, arylaminoaralkyl, aralkylaminoaralkyl, alkanoylaminoaralkyl, aroylaminoaralkyl, aralkanoylaminoaralkyl, alkylloxycarbonylaminoaralkyl, aryloxycarbonylaminoaralkyl, aralkoxycarbonylaminoaralkyl, alkylaminocarbonylaminoaralkyl, arylaminocarbonylaminoaralkyl, aralkylaminocarbonylaminoaralkyl, piperaziny, piperidinyl, pyrrolidinyl, imidazolidinyl, morpholinyl, amidino, acetyl, guanidinoalkyl, amidinoalkyl

and wherein R^3 and R^4 are optionally substituted by one or more substituents independently selected from the group comprising hydrogen, amino, hydroxy, halogen, alkyl, alkylamino, alkanoyl, hydroxyalkyl, cycloalkyl, cycloalkylalkyl, aryl, aralkyl, aminoaryl, arylaminoalkyl, arylaminoalkylamino, aralkanoyl, aroyl, piperaziny, piperidinyl, pyrrolidinyl, imidazolidinyl, morpholinyl, amidino, acetyl, Het¹ and Het²,

wherein R^5 is oxo or thio, wherein R^6 is hydrogen, and wherein R^7 is hydrogen, fluor or methyl.

In a particularly preferred embodiment, a compound according to the invention is a compound having the general formula I or pharmaceutically acceptable salts, solvates or functional derivatives thereof,

wherein R^1 is selected from the group comprising $-CH_2-$, oxa, thia

wherein R^2 is selected from the group comprising hydrogen and cyano,

wherein R^3 and R^4 are selected from the group comprising hydrogen, alkyl, aryl, cycloalkyl, aralkyl, cycloalkylalkyl, alkylamino, aminoalkyl, alkylaminoalkyl, arylamino, aminoaryl, aminoaralkyl, arylaminoalkyl, aralkylamino, aralkylaminoalkyl, piperazinyl, piperidinyl, pyrrolidinyl, imidazolidinyl, morpholinyl, amidino, acetyl, guanidinoalkyl, amidinoalkyl

and wherein R^3 and R^4 are optionally substituted by one or more substituents independently selected from the group comprising hydrogen, amino, hydroxy, halogen, alkyl, alkylamino, alkanoyl, hydroxyalkyl, cycloalkyl, cycloalkylalkyl, aryl, aralkyl, aminoaryl, arylaminoalkyl, arylaminoalkylamino, aralkanoyl, aroyl, piperazinyl, piperidinyl, pyrrolidinyl, imidazolidinyl, morpholinyl, amidino, acetyl, Het¹ and Het²;

wherein R^5 is oxo or thio, wherein R^6 is hydrogen, and wherein R^7 is hydrogen or fluor.

In a more preferred embodiment, the compounds of the invention have general formula II as represented below,

formula II

wherein $R_1, R_2, R_3, R_5, R_6, R_7$ have the same meaning as indicated herein,

wherein R_4, R_8, R_9, R_{10} are selected from the group comprising nitrogen, hydrogen, oxyalkyl, alkyl, alkyloxy, alkyloxyalkyl, alkylthioalkyl, alkylamino, aminoalkyl, alkoxycarbonyl, alkylthiocarbonyl, alkanoyl, aminoalkanoyl, aminocarbonyl, hydroxyalkyl, cycloalkyl, cycloalkylalkyl, cycloalkylcarbonyl, cycloalkylalkanoyl, cycloalkylthiocarbonyl, cycloalkylalkoxycarbonyl, cycloalkylalkoxythiocarbonyl, cycloalkylthioalkyl, alkylcarbonyloxyalkyl, cycloalkylcarbonyloxyalkyl, alkylaminocarbonyl, alkylaminoalkyl, aryl, arylaminoalkoxy, arylamino, aminoaryl, aminoaralkyl, arylaminoalkyl, arylaminoalkylamino, aryloxy, aryloxyalkoxy, aryloxyalkyl, aryloxyalkylamino, aralkyl, aralkoxy, aralkylamino, aralkanoyl, aroyl, arylcarbonyl, aryloxycarbonyl, arylthiocarbonyl, aralkoxycarbonyl, arylalkylthiocarbonyl, aryloxyalkyl, arylthioalkyl, haloalkyl, aryloxycarbonylalkyl, aryloxyalkanoyl, aralkylcarbonyloxyalkyl, arylaminocarbonyl, aralkylaminocarbonyl,

and wherein R₄, R₅, R₉, R₁₀ are optionally substituted by one or more substituents

- 25 Independently selected from the group comprising hydrogen, amino, hydroxy, halogen, alkyl, alkylamino, alkanoyl, hydroxyalkyl, cycloalkyl, cycloalkylalkyl, aryl, aralkyl, aminoaryl, arylaminoalkyl, arylaminoalkylamino, aralkanoyl, aroyl, piperazinyl, piperidinyl, pyrrolidinyl, imidazolidinyl, morpholinyl, amidino, acetyl, Het¹ and Het².
- 30 In a specific embodiment, a compound is provided being N¹-benzyl-4-oxo-4-(1-piperidinyl)-1,3(S)-butanediamine as indicated with formula IV according to the specification given below. This particular compound corresponding to formula IV as represented below is also referred to as KS IV.7.

5 The potency of the compounds to inhibit serine type dipeptidyl peptidases according to the present invention are expressed as IC_{50} value. The " IC_{50} value" is defined as the concentration of a compound, which causes the enzyme activity to decrease with 50 % under assay conditions.

10 The compounds according to the present invention all preferably inhibit DPP activity, exhibiting relatively high activity at relatively low concentrations, as indicated by low IC_{50} values. Preferably, the IC_{50} values of the compounds according to the present invention are lower than 100 μM , more preferred lower than 10 μM , even more preferred lower than 0.1 μM .

15 According to another preferred embodiment, some of the presented compounds are very useful to differentiate between DPP II and DPP IV activity in biological systems, since some of these compounds are highly specific and selective for DPPII inhibitory activity than currently available inhibitors. DPP II and DPP IV both preferentially release N-terminal dipeptide moieties (Xaa-Pro- or Xaa-Ala-) from some oligopeptides or proteins. DPP IV and DPP II share substrate specificity, and differentiating between these activities is generally a
20 challenging and difficult task.

In an example, the compound KS IV.7 as defined above is a particularly active and selective DPPII inhibitor. This compound has an IC_{50} value of 0.00203 μM for DPPII. For comparison, the IC_{50} value of this compound towards DPP IV comprises 247 μM . This compound thus has
25 a particularly high selectivity of for DPPII, and is particularly suitable for in applications wherein a differentiation is required between DPP II and DPP IV activity.

In a preferred embodiment, the invention thus relates to compounds for use as a medicament. The compounds according to the present invention can be used in the treatment

of pathological states associated with excessive, impaired or unbalanced activity of a serine type dipeptidyl peptidase. In a preferred embodiment, said compounds according to the invention can be used in the treatment of diseases associated with excessive, impaired or unbalanced activity of DPPIV. In another preferred embodiment, said compounds according to the invention can be used in the treatment of diseases associated with excessive, impaired or unbalanced activity of DPPII.

According to a further aspect the invention also relates to the use of the compounds according to the invention in the preparation of a medicament for inhibiting the activity of a serine type dipeptidyl peptidase. In a preferred embodiment, the invention also relates to the use of said compounds according to the invention in the preparation of a medicament for inhibiting the activity of DPPIV. In another preferred embodiment, the invention also relates to the use of said compounds according to the invention in the preparation of a medicament for inhibiting the activity of DPPII.

Preferably, the invention also relates to the use of the compounds according to the invention in the preparation of a medicament for treating diseases associated with excessive, impaired or unbalanced activity of a serine type dipeptidyl peptidase. In a preferred embodiment, the invention also relates to the use of said compounds according to the invention in the preparation of a medicament for treating diseases associated with excessive, impaired or unbalanced activity of DPPIV. In another preferred embodiment, the invention also relates to the use of said compounds according to the invention in the preparation of a medicament for treating diseases associated with excessive, impaired or unbalanced activity of DPPII. Such medicaments are then specifically intended for treatment and prophylaxis of the conditions listed below. Starting from the available information on the correlation between a particular serine type dipeptidyl peptidase activity and various disease states the skilled person will be able to define therapeutic utilities for the inhibitory compounds of the invention. While not being limited thereby, the compounds of the present invention are believed useful for the treatment of a variety of metabolic, neuroendocrine, gastrointestinal, viral, and inflammatory diseases, including, but not limited to, diabetes, obesity, hyperlipidemia, dermatological or mucous membrane disorders, psoriasis, intestinal distress, constipation, (auto)immune disorders such as encephalomyelitis, complement mediated disorders such as glomerulonephritis, lipodystrophy, and tissue damage, psychosomatic, depressive, and neuropsychiatric disease such as anxiety, depression, insomnia, schizophrenia, epilepsy,

spasm, and chronic pain, HIV infection, allergies, inflammation, arthritis, transplant rejection, high blood pressure, congestive heart failure, tumors, and stress-induced abortions.

5 The invention also relates to the diagnostic use of the compounds. In another preferred embodiment, the compounds according to the present invention can be used in diagnostic and research methods such as fluorescence, purification and radio-assays, imaging, *in situ* histochemical and cytochemical staining.

10 In particular, the present invention relates to the use of a compound according to the invention in purification procedures of serine type peptidases and preferably of dipeptidyl peptidases. The said compounds can be immobilized to a suitable matrix or used as a competitor to elute bound enzyme from a matrix containing an immobilized compound.

15 The present invention also includes compounds, which have been modified without abolishing the reactivity with the active site. Examples of such modifications are the incorporation of radioactive labels such as Iodine¹²⁵, or non-radioactive labels such as biotin or a fluorophore. The incorporation of a (radioactive) label is useful in diagnostic methods using the modulating compounds. Labelled compounds can be used essentially in the same type of applications as labelled monoclonal antibodies, e.g. fluorescence and radioassays, 20 cytofluorimetry, fluorescence activated cell sorting, etc ... The principles of such techniques are well known to the person skilled in the art.

25 The DPP inhibitors described above which form complexes with dipeptidyl peptidases are therefore suitable for diagnostic applications such as imaging and histochemical staining of DPP. This requires the introduction of a radiolabel, e.g. iodine, or a fluorescent or other type of reporter group. Because of their small size they are expected to penetrate tissue more easily as, for example, antibodies. Formulations of the compounds to be used in diagnostic applications are also part of this invention.

30 DPP activities can interfere with certain assays by cleaving the substrate used in the test and thereby giving either false positive (when a chromogenic substrate is cleaved) or false negative results (when a peptide is degraded). The inhibitors of this invention can be used to inactivate a contaminating DPP activity before carrying on with the analysis.

In cytochemistry and histochemistry labeled inhibitors can be used to directly visualize the cellular distribution of the target protease (DPP). The label can be fluorescent for fluorescence microscopy, radioactive for autoradiography, or electron dense for electron microscopy. The target structures can be whole cells, cells fixed onto slides or sections
5 through solid tissue. A useful modification of these techniques is to use an indirect ("sandwich") assay employing the specific high affinity interaction between biotin and avidin (reviewed in Methods in Enzymology, vol. 184, 1990).

For imaging of tumours expressing high amounts of the target protease (DPP), inhibitors
10 labeled with a suitable isotope (e.g. I^{125} or I^{131}) can be injected and after clearing of the excess inhibitor from the circulation, the tumour can be visualized by radio-scintigraphy.

The compounds of the invention which form a stable adduct with DPP may be used as a tool for diagnosing of the above cited disease states.

15 Furthermore, the present invention also encompasses pharmaceutical compositions prepared for storage and subsequent administration, which have a therapeutically effective amount of one or more compounds of the invention and a pharmaceutically acceptable excipient, carrier or diluent. Such pharmaceutical preparations are intended for the treatment and prophylaxis
20 of the above conditions.

The term "therapeutically effective amount" as used herein means that amount of active compound or component or pharmaceutical agent that elicits the biological or medicinal response in a tissue, system, animal or human that is being sought by a researcher,
25 veterinarian, medical doctor or other clinician, which includes alleviation of the symptoms of the disease being treated.

Acceptable carriers and diluents are well known and are described, for example, in Remington's Pharmaceutical Sciences, Mack Publishing Co. (A. R. Gennaro edit. 1985).
30 Preservatives, stabilizers, dyes and flavoring agents may be provided in the pharmaceutical compositions. For example, sodium benzoate, sorbic acid and esters of p-hydroxybenzoic acid may be added as preservatives. In addition antioxidants and suspending agents may be used.

The compositions of this invention may be formulated and used as tablets, capsules or elixirs for oral administration; suppositories for rectal administration; sterile solutions or suspensions for injectable administration; aerosols; unguents for topical administration. If desired, absorption enhancing preparations (e.g. liposomes) or other appropriate delivery systems may be used. The amount of the active substances(s) in a dosage unit may vary between 0.01 mg and 1 g.

Formulations of the present invention include those especially formulated for oral, buccal, parental, transdermal, inhalation, intranasal, transmucosal, implant, or rectal administration in dosage unit formulations containing conventional non-toxic pharmaceutically acceptable carriers, adjuvants and vehicles.

Among the variety of administrations, oral administration typically is preferred. For oral administration tablets, capsules, and caplets may contain conventional excipients such as binding agents, fillers, lubricants, disintegrants, and/or wetting agents. Non-limiting examples of binding agents include syrup, acacia, gelatin, sorbitol, tragacanth, mucilage of starch, or polyvinylpyrrolidone (PVP). Non-limiting examples of fillers include, for example, lactose, sugar, microcrystalline cellulose, maize-starch, calcium phosphate or sorbitol. Non-limiting examples of lubricants include, for example, magnesium stearate, stearic acid, talc, polyethylene glycol or silica. Non-limiting examples of disintegrants include, for example, potato starch or sodium starch glycolate. A non-limiting example of a wetting agent includes sodium lauryl sulfate. The tablets additionally may be coated according to methods known in the art.

Alternatively, the compounds of the present invention may be incorporated into oral liquid preparations such as aqueous or oily suspensions, solutions, emulsions, syrups, or elixirs. Moreover, formulations containing these compounds may be presented as a dry product for constitution with water or other suitable vehicle before use. Liquid preparations may contain conventional additives. Non-limiting examples of such additives include suspending agents such as sorbitol syrup, methyl cellulose, glucose/sugar syrup, gelatin, hydroxyethylcellulose, carboxymethyl cellulose, aluminum stearate gel or hydrogenated edible fats. Additionally, emulsifying agents such as lecithin, sorbitan mono-oleate or acacia; non-aqueous vehicles (which may include edible oils) such as almond oil, fractionated coconut oil, oily esters, propylene glycol or ethyl alcohol may be included. Further, preservatives such as methyl or

propyl p-hydroxybenzoates or sorbic acid, may be incorporated into the preparation. Such preparations may also be formulated as suppositories, for example, containing conventional suppository bases such as cocoa butter or other glycerides.

- 5 Additionally, formulations of the present invention may be formulated for parenteral administration by injection or continuous infusion. Formulations for injection may take such forms as suspensions, solutions, or emulsions in oily or aqueous vehicles, and may contain formulatory agents such as suspending, stabilizing and/or dispersing agents. Alternatively, the active ingredient may be in powder form for constitution with a suitable vehicle, for
10 example, sterile, pyrogen-free water, before use.

- The formulations according to the invention may also be formulated as a depot preparation. Such long acting formulations may be administered by implantation, for example, subcutaneously or intramuscularly, or by intramuscular injection. Accordingly, the compounds
15 of the invention may be formulated with suitable polymeric or hydrophobic materials, such as an emulsion in an acceptable oil, ion exchange resins, or as sparingly soluble derivatives, such as a sparingly soluble salt.

- The compounds of the present invention may be used in combination with one or more other
20 therapeutic or diagnostic agents in the treatment, prevention, suppression, amelioration, or diagnosing of diseases or conditions for which compounds of the invention or the other agents may have utility, where the combination of the drugs together are safer or more effective than either agent alone.

- 25 Such other agents may be administered, by a route and in an amount commonly used therefor, contemporaneously or sequentially with a compound of the invention. When a compound of the invention is used contemporaneously with one or more other agents, a pharmaceutical composition in unit dosage form containing such other agents and the compound of the invention. Is preferred. However, the combination therapy may also include
30 therapies in which the compound of the invention. and one or more other agents are administered on different overlapping schedules.

It is also contemplated that when used in combination with one or more other active ingredients, the compounds of the present invention and the other active ingredients may be

used in lower doses than when each is used singly. Accordingly, the pharmaceutical compositions of the present invention include those that contain one or more other active ingredients, in addition to a compound of the invention.

5 Examples of other active ingredients that may be administered in combination with a compound of the present invention, and either administered separately or in the same pharmaceutical composition, include, but are not limited to other dipeptidyl peptidase inhibitors. In a preferred embodiment, certain compounds of the invention can be combined with each other such that synergetic inhibiting effects are obtained.

10 The above combinations include combinations of a compound of the present invention not only with one other active compound, but also with two or more other active compounds. Likewise, compounds of the present invention may be used in combination with other agents that are used in the treatment/prevention/suppression or amelioration of diseases or
15 conditions for which compounds of the present invention are useful.

The weight ratio of a compound of the present invention to a second active ingredient may be varied and will depend upon the effective dose of each ingredient. Generally, an effective dose of each will be used. Thus, for example, when a compound of the present invention is
20 combined with another agent, the weight ratio of the compound of the present invention to the other agent will generally range from about 1000:1 to about 1:1000, preferably about 200:1 to about 1:200. Combinations of a compound of the present invention and other active ingredients will generally also be within the aforementioned range, but in each case, an effective dose of each active ingredient should be used. In such combinations the compound
25 of the present invention and other active agents may be administered separately or in conjunction. In addition, the administration of one element may be prior to, concurrent to, or subsequent to the administration of other agent(s).

The dosage for the compounds of the present invention can range broadly depending upon
30 the desired effects and the therapeutic indication. The pharmaceutical compositions of this invention can be administered to humans in dosage ranges specific for each compound comprised in said compositions. The dosage for the compounds of the present invention can range broadly depending upon the desired effects and the therapeutic indication.

Pharmaceutical formulations may be presented in unit dose forms containing a predetermined amount of active ingredient per unit dose. Such a unit may contain certain amounts of a compound of the present invention depending on the condition being treated, the route of administration, and the age, weight and condition of the patient. Examples of
5 such amounts include the formulation containing about 0.1 to about 99.9% active ingredient. Preferred unit dosage formulations are those containing a predetermined dose, such as a daily dose, or an appropriate fraction thereof, of an active ingredient. Such pharmaceutical formulations may be prepared by any of the methods well known in the pharmacy art.

- 10 In another embodiment, the invention relates to a method of treatment of diseases associated with excessive, impaired or unbalanced activity of a serine type dipeptidyl peptidase comprising administering to an individual in need of such treatment a pharmaceutical composition according to the invention. The term "individual," as used herein refers to an animal, preferably a mammal, and most preferably a human, who has been the object of
15 treatment, observation or experiment.

In accordance with the method of the present invention, said pharmaceutical composition can be administered separately at different times during the course of therapy or concurrently in divided or single combination forms. The present invention is therefore to be understood as
20 embracing all such regimes of simultaneous or alternating treatment.

It will be understood, however, that specific dose level and frequency of dosage for any particular patient may be varied and will depend upon a variety of factors including the activity of the specific analogue employed, the metabolic stability and length of action of that
25 compound, the age, body weight, general health, sex, diet, mode and time of administration, rate of excretion, drug combination, the severity of the particular condition, and the host undergoing therapy.

In another aspect, the present invention relates to a method for inhibiting the activity of a
30 serine type dipeptidyl peptidase by administering a compound according to the present invention. The present invention relates to a method for *in vitro* inhibition of the activity of a serine type dipeptidyl peptidase by means of administering a suitable concentration of a compound of the invention. Such method is in particular useful when a DPP enzyme inactivates a peptide prior to measurement thereof in a peptide assay. The compounds of the

- invention can be used to inhibit the degradation of the peptide substrate by the enzyme in such assay. The compounds of the invention are also useful in a method for *ex vivo* inhibition of the activity of a serine type dipeptidyl peptidase, such as the treatment outside the body of cells and organs for transplantation in order to avoid rejection thereof by the recipient body.
- 5 The method comprises administering a suitable concentration of a compound according to the invention. Furthermore, the compounds of the invention can be used in a method for *in vivo* inhibiting of the activity of a serine type dipeptidyl peptidase by means of administering to a living organism a suitable amount of a compound of the invention.
- 10 In a further embodiment, the present invention relates to kits comprising a compound according to the invention. In a more preferred embodiment, the invention further provides for assay kits for assaying the inhibition of the activity of a serine type dipeptidyl peptidase comprising a compound according to the invention and means to detect said inhibition.
- 15 The present invention will be further elucidated with reference to the following examples which are only given for illustration purposes and are in no way intended to limit the invention.

Examples

- 20 Example 1 Non-limiting examples of compounds according to the invention
Non-limiting examples of compounds according to the invention and having general formula II are listed in Table A, wherein reference is made to R₁, R₂, R₃, R₄, R₅, R₆, R₇, R₈, R₉, R₁₀.

As illustrated in this example, the compounds according to the invention strongly inhibit DPPII activity, as indicated by the low IC_{50} values of the illustrated compounds for DPPII. In particular, most of the compounds in the following examples have an activity in inhibiting DPPII generally lower than 100 μM and in some cases lower than 10 μM and even lower than 1 μM . Such results are indicative of the intrinsic activity of the compounds in use as inhibitors of DPPII enzyme activity.

In particular, the compound with formula IV is a particularly active and selective DPPII inhibitor. This compound has an IC_{50} value of 0.00203 μM for DPPII. For comparison, the IC_{50} value of this compound towards DPP IV comprises 247 μM . This compound thus has a particularly high selectivity of for DPPII, and is particularly suitable for in applications wherein a differentiation is required between DPP II and DPP IV activity.

In a preferred embodiment of the present invention, the present compounds may be active, i.e. have a strong inhibitory activity on DPP II. In addition, in another preferred embodiment, the present compounds as claimed in claim 1 may show a high selectivity for DPPII.

Due to their inhibiting activity, the presented compounds are very useful to be applied in all kinds of research, therapeutic and diagnostic applications for inhibiting the activity of a serine type dipeptidyl peptidase.

In another preferred embodiment a compound according to the invention is represented with following formula III:

Formula III

Example 3 Synthesis of the compounds according to the invention

The present example illustrates the synthesis of compounds as illustrated in Table B of example 2, according to different synthesis schemes.

The compounds having formulas IV, IX, XI, XII, XIII, XIV, XV, XVI and XXI as illustrated in example 2, Table B, are synthesised as follows. The synthesis of compounds having formulas IV, IX, XI, XII, XIII, XIV, XV, XVI and XXI is illustrated in Figure 1.

5 **N¹-benzyl-4-oxo-4-(1-piperidinyl)-1,3(S)-butanediamine (IV)**

Procedure A

To a mixture of *N*- α -benzyloxycarbonyl-*N*- ϵ -*tert*-butoxycarbonyl-*L*-diaminobutyric acid (19.4 mmol), triethylamine (53.8 mmol) and TBTU (19.4 mmol) in DMF (40 ml) was added piperidine (17.6mmol). After stirring at room temperature overnight, water was added and the mixture was extracted with EtOAc (3 x 50 ml). The combined organic layers were washed with 1N HCl (2 x 25 ml), 5% NaHCO₃ (2 x 25 ml) and brine (25 ml). The organic layer was dried over Na₂SO₄, evaporated and purified by column chromatography (94%).

Procedure B

Deprotection of *tert*-butoxycarbonyl (Boc) was done by dissolving in 15 ml of a TFA/dichloromethane (1:1) mixture. The solution was stirred for 3 h and the volatile part was removed under reduced pressure. After coevaporating several times with ether, the oily residue was used as such for the next step (95%).

Procedure C

To a mixture of compound obtained in previous step (2.3 mmol) and the appropriate aldehyde/keton (IV: benzaldehyde) (2.3 mmol) in dry methanol (15 ml) was added NaCNBH₃ (1.65 mmol). The mixture was stirred overnight at room temperature. Concentrated HCl was added until pH < 2, and the methanol was removed *in vacuo*. The residue was taken up in 20 ml of water and extracted with diethylether (2 x 20 ml). The aqueous solution was brought to pH > 11 with 2N NaOH and extracted several times with diethylether. The combined extracts were dried over Na₂SO₄ and evaporated *in vacuo*. The residue was purified by preparative TLC using EtOAc/MeOH (95:5) as eluent (50%).

Procedure D

Deprotection of the benzyloxycarbonyl (Z) group was done by acidolysis: the compound resulted from previous step was dissolved in 30% HBr in acetic acid. After completion of the deprotection which was monitored by TLC, the volatile part was removed *in vacuo*. The residue was coevaporated several times with diethylether and was finally precipitated in diethylether (90%).

¹H-NMR (D₂O, 400 MHz) δ 1.58-1.74 (m, 6H, CH₂), 2.29-2.48 (m, 2H, β -CH₂), 3.15-3.24 (m, 2H, γ -CH₂), 3.48-3.60 (m, 4H, CH₂), 4.36 (s, 2H, CH₂), 4.65-4.74 (m, 1H, α -CH), 7.58 (s, 5H, H_{arom}); MS (ES⁺) m/z 276 (M + H)⁺; HPLC (214 nm): rt 9.92 min, 94%.

5 **Benzyl 3-amino-1(S)-(1-piperidinylcarbonyl)propylcarbamate (IX)**

The title compound was obtained according to procedure A, followed by procedure B.

¹H-NMR (D₂O, 400 MHz) δ 1.41-1.71 (m, 6H, CH₂), 1.98-2.17 (m, 2H, β -CH₂), 3.02-3.76 (m, 6H, γ -CH₂, CH₂), 4.70-4.85 (m, 1H, α -CH), 5.17 (s, 2H, CH₂), 7.46 (s, 5H, H_{arom}); MS (ES⁺) m/z 320 (M + H)⁺; LC-MS: rt 17.3 min, 100%, m/z 320 (M + H)⁺; UV-HPLC: rt 14.48 min, 96%.

10

N¹-benzyl-2(S)-(1-piperidinylcarbonyl)-1,4-butanediamine (XI)

The synthesis of this compound started by carrying out procedure A.

Procedure E

Deprotection of the benzyloxycarbonyl (Z) group was done by hydrogenolysis: to a mixture of
15 compound obtained from previous step in methanol (50 ml) was added Pd/C (20%) and acetic acid (1ml). A flow of nitrogen-gas was carried over the solution for 10 minutes, followed by a flow of H₂-gas. The reaction was monitored by TLC. After completion, again a flow of nitrogen was carried over the solution for 10 minutes. The mixture was filtered over a celite and the methanol was removed in vacuo. The compound obtained was used as such in
20 the next step.

Reductive amination was carried out with benzaldehyde according to procedure C. The title compound was finally obtained by deprotection of the tert-butyloxycarbonyl group using procedure B. The final product could be precipitated in diethylether.

MS (ES⁺) m/z 276 (M + H)⁺; HPLC (214 nm): rt 10.63 min, 98%.

25

N-[3(S)-amino-4-oxo-4-(1-piperidinyl)butyl]acetamide (XII)

The synthesis of this compound started following procedure A and B.

Procedure F

The compound (1.57 mmol) obtained from previous step was dissolved in pyridine (5 ml) and
30 acetic acid anhydride (2.35 mmol) was added. The solution was stirred overnight and pyridine was evaporated *in vacuo*. The residue was extracted with 2N HCl and diethylether. The combined organic layers were dried over Na₂SO₄ and evaporated. Purification was carried out by preparative TLC using EtOAc/MeOH (95:5) as eluent (50%).

The title compound was finally obtained by deprotection of the benzyloxycarbonyl group according to procedure D.

¹H-NMR (D₂O, 400 MHz) δ 1.55-1.76 (m, 6H, CH₂), 2.03-2.18 (m, 5H, CH₃, β -CH₂), 3.30-3.64 (m, 6H, γ -CH₂, CH₂), 4.41-4.67 (m, 1H, α -CH); MS (ES⁺) m/z 228 (M + H)⁺; HPLC (214 nm): rt 6.50 min, 96%.

4-Oxo-4-(1-piperidinyl)-N¹-(4-piperidinyl)-1,3(S)-butanediamine (XIII)

This compound was synthesised according to procedure A and B, followed by procedure C using benzyl 4-oxo-1-piperidinecarboxylate for reductive amination. The title compound was finally obtained by deprotection of the benzyloxycarbonyl group according to procedure D. MS (ES⁺) m/z 269 (M + H)⁺; HPLC (214 nm): rt 5.46 min, 90%.

Benzyl-4-[[4-amino-2(S)-(1-piperidinylcarbonyl)butyl]amino]-1-piperidinecarboxylate (XIV)

This compound was synthesised according to procedure A and E, followed by procedure C using 4-oxo-Z-piperidine for reductive amination. The title compound was finally obtained by deprotection of the tert-butyloxycarbonyl group according to procedure B. The final product could be precipitated in diethylether. MS (ES⁺) m/z 403 (M + H)⁺; HPLC (214 nm): rt 14.25 min, 96%.

N-[3(S)-amino-4-oxo-4-(1-piperidinyl)butyl]guanidine (XV)

The synthesis of this compound started according to procedure A and B.

Procedure G

To a stirred solution of 1-H-pyrazole-1-[N, N'-bis(tert-butyloxycarbonyl)]carboxamide (1.2 mmol) in ACN/H₂O (95:5, 20 ml) was added the appropriate amine (1.2 mmol) and DIEA (3.6 mmol). The mixture was refluxed for 2h. After completion of the reaction, the solvent was removed under reduced pressure and the residue was purified by preparative TLC using DCM/MeOH (95:5) as eluent.

Deprotection of the tert-butyloxycarbonyl groups was done according to procedure B. Finally the title compound was obtained by deprotection of the benzyloxycarbonyl group according to procedure E.

MS (ES⁺) m/z 228 (M + H)⁺; HPLC (214 nm): rt 5.61 min, 95%.

N-[3-amino-1(S)-(1-piperidinylcarbonyl)propyl]guanidine (XVI)

This compound was synthesised according to procedure A and E, followed by procedure G. The title compound was finally obtained by deprotection of the tert-butyloxycarbonyl groups according to procedure B. The final product could be precipitated in diethylether.

5 MS (ES⁺) m/z 228 (M + H)⁺.

4-oxo-4-(1-piperidinyl)-N³-(4-piperidinyl)-1,3(S)-butanediamine (XXI)

This compound was synthesised according to procedure A and E, followed by procedure C benzyl 4-oxo-1-piperidinecarboxylate for reductive amination. The title compound was finally
 10 obtained by deprotection of the tert-butyloxycarbonyl group and benzyloxycarbonyl group according to procedure D. The final product could be precipitated in diethylether.

MS (ES⁺) m/z 269 (M + H)⁺.

15 The compounds having formulas XVIII, XVII and XX as illustrated in example 2, Table B, are synthesised as follows. The synthesis of these compounds illustrated in Figure 2.

Benzyl 4{[2-oxo-2-(1-piperidinyl)ethyl]amino}-1-piperidinecarboxylate (XVIII)

The synthesis of this compound started from N- α -tert-butyloxycarbonyl-L-glycine and was carried out according to procedure A, followed by procedure B. Reductive amination with
 20 benzyl 4-oxo-1-piperidinecarboxylate was done using procedure C to obtain the title compound.

MS (ES⁺) m/z 360 (M + H)⁺; HPLC (214 nm): rt 16.03 min, 92%.

N-(2-oxo-2-piperidin-1-ylethyl)piperidin-4-amine (XVII)

25 The synthesis of this compound started from compound XVIII. The title compound was obtained by deprotection of the benzyloxycarbonyl group according to procedure D.

¹H-NMR (D₂O, 400 MHz) δ 1.51-1.68 (m, 6H, CH₂), 1.89-1.99 (m, 2H, CH₂), 2.39-2.43 (m, 2H, CH₂), 3.10-3.16 (m, 2H, CH₂), 3.35-3.38 (m, 2H, CH₂), 3.49-3.51 (m, 2H, CH₂), 3.57-3.62 (m, 3H, CH, CH₂), 4.21 (s, 2H, CH₂); MS (ES⁺) m/z 226 (M + H)⁺; HPLC (214 nm): rt 6.21 min,
 30 94%.

1-Benzyl-N-[2-oxo-2-(1-piperidinyl)ethyl]-4-piperidinamine (XX)

The synthesis of this compound started from compound XVIII.

Procedure H

To a solution of compound XVIII (5.7 mmol) in dioxane/H₂O (1:1, 20 ml) was added TEA (17.2 mmol) and Boc₂O (6.3 mmol). The mixture was stirred at room temperature for 5 hours. The dioxane was evaporated under reduced pressure, the aqueous solution was acidified and extracted with EtOAc (2 x 50 ml). The combined organic layers were dried over Na₂SO₄ and evaporated.

Deprotection of the benzyloxycarbonyl group was done according to procedure E, followed by reductive amination with benzaldehyde according to procedure C. The title compound was obtained by final deprotection of the *tert*-butyloxycarbonyl group using procedure B. The final product could be precipitated in diethylether.

MS (ES⁺) m/z 316 (M + H)⁺.

The compounds having formulas V, VI, VII, VIII, X and XIX as illustrated in example 2, Table B, are synthesised as follows. The synthesis of these compounds is illustrated in Figure 3.

4-Oxo-4-(1-piperidiny)-1,3(S)-butanediamine (V)

The synthesis of this compound started from *N*- α , γ -di-*tert*-butyloxycarbonyl-L-diaminobutyric acid.

Procedure I

Compounds were prepared by parallel synthesis using a PASP-protocol: protected amino acid (0.375 mmol), HOBt (0.425 mmol) and PS-Carbodiimide (0.75 mmol) were added to a dry reaction vessel. Dichloromethane (4 ml) was added and the mixture was stirred for 10 min prior to the addition of the appropriate amine. After stirring at room temperature overnight the polymer-bound polyamine (1.5 mmol) was added and stirring was continued for 5 h. The reaction mixture was filtered and the amide product was collected in the filtrate. The resins are washed two times with 4 ml of dichloromethane and the combined fractions were evaporated under reduced pressure. The purity of the compounds was checked by TLC and reverse phase HPLC. Compounds were purified by preparative TLC using a mixture of EtOAc and hexane (usually 40/60) as eluent.

The title compound was obtained by deprotection of the *tert*-butyloxycarbonyl group according to procedure B.

¹H-NMR (D₂O, 400 MHz) δ 1.59-1.73 (m, 6H, CH₂), 2.27-2.34 (m, 2H, β -CH₂), 3.12-3.23 (m, 2H, γ -CH₂), 3.50-3.71 (m, 4H, CH₂), 4.72 (t, 1H, α -CH); LC-MS: rt 0.8 min, 100%, m/z 186 (M + H)⁺; HPLC (214 nm): rt 3.62 min, 100%.

4-Oxo-4-(1-piperidinyl)-1,3(R)-butanediamine (VI)

The synthesis of this compound started from *N*- α , γ -di-*tert*-butyloxycarbonyl-*D*-diaminobutyric acid according to procedure I. The title compound was obtained by deprotection of the *tert*-butyloxycarbonyl group according to procedure B.

¹H-NMR (D₂O, 400 MHz) δ 1.50-1.62 (m, 6H, CH₂), 2.15-2.21 (m, 2H, β -CH₂), 3.02-3.11 (m, 2H, γ -CH₂), 3.41-3.59 (m, 4H, CH₂), 4.61 (t, 1H, α -CH); LC-MS: rt 0.7 min, 100%, m/z 186 (M + H)⁺; HPLC (214 nm): rt 4.66 min, 100%.

4-(4-morpholinyl)-4-oxo-1,3(S)-butanediamine (VII)

The synthesis of this compound started from *N*- α , γ -di-*tert*-butyloxycarbonyl-*L*-diaminobutyric acid according to procedure I using morpholine as amine compound. The title compound was obtained by deprotection of the *tert*-butyloxycarbonyl group according to procedure B.

¹H-NMR (D₂O, 400 MHz) δ 2.27-2.38 (m, 2H, β -CH₂), 3.12-3.28 (m, 2H, γ -CH₂), 3.61-3.85 (m, 8H, CH₂), 4.71 (t, 1H, α -CH); LC-MS: rt 0.6 min, 100%, m/z 188 (M + H)⁺; HPLC (214 nm): rt 3.41 min, 100%.

4-oxo-4-(1-piperazinyl)-1,3(S)-butanediamine (VIII)

The synthesis of this compound started from *N*- α , γ -di-*tert*-butyloxycarbonyl-*L*-diaminobutyric acid according to procedure I using Boc-piperazine as amine compound. The title compound was obtained by deprotection of the *tert*-butyloxycarbonyl group according to procedure B.

¹H-NMR (D₂O, 400 MHz) δ 2.25-2.40 (m, 2H, β -CH₂), 3.12-3.28 (m, 2H, γ -CH₂), 3.33-3.50 (m, 4H, CH₂), 3.75-4.15 (m, 4H, CH₂), 4.76 (t, 1H, α -CH); LC-MS: rt 0.5 min, 94%, m/z 187 (M + H)⁺; HPLC (214 nm): rt 3.40 min, 100%.

Benzy 3-amino-4-oxo-4-(1-piperidinyl)butylcarbamate (X)

The synthesis of this compound started from *N*- α -*tert*-butyloxycarbonyl-*N*- γ -benzyloxycarbonyl-*L*-diaminobutyric acid according to procedure I using piperidine as amine compound. The title compound was obtained by deprotection of the *tert*-butyloxycarbonyl group according to procedure B.

¹H-NMR (D₂O, 400 MHz) δ 1.20-1.71 (m, 6H, CH₂), 1.85-2.05 (m, 2H, β -CH₂), 3.29-3.55 (m, 6H, CH₂, γ -CH₂), 4.44 (m, 1H, α -CH), 5.13 (s, 2H, CH₂), 7.43 (s, 5H, H_{arom}); LC-MS: rt 17.2 min, 99%, m/z 320 (M + H)⁺; UV-HPLC: rt 14.85 min, 97%.

N-[2-oxo-2-(1-piperidinyl)ethyl]cyclopentanamine (XIX)**Procedure J**

To a stirred and cooled solution of the appropriate amine (50 mmol) in diethylether (10 ml) was added dropwise over 30 minutes a solution of bromoacetic acid (10 mmol) in diethylether (2 ml). The mixture was stirred several hours at 0 °C and was then allowed to warm up and stirred overnight. The pH was raised to 12 with 2N NaOH and extracted with ether to remove unreacted amine. The aqueous layer was acidified (pH = 1) and evaporated in vacuo. The residue was taken up in a small volume of methanol, filtrated and evaporated under reduced pressure. The residue was used as such in the next step. Introduction of *tert*-butyloxycarbonyl (Boc) was done according to procedure H. The title compound was finally obtained according to procedure I using piperidine as amine compound, followed by deprotection of the *tert*-butyloxycarbonyl group according to procedure B.

¹H-NMR (D₂O, 400 MHz) δ 1.49-1.72 (m, 12H, CH₂), 2.02-2.07 (m, 2H, CH₂), 3.31 (t, 2H, CH₂), 3.45 (t, 2H, CH₂), 3.51-3.59 (m, 1H, CH), 4.03 s, 2H, CH₂; MS (ES⁺) m/z 211 (M + H)⁺; HPLC (214 nm): rt 9.52, 98%.

The compounds having formulas XXII, XXIII, XXIV, XXV, XXVI, XXVII, XXVIII, XXIX, XXX, XXXI, XXXII, XXXIII, XXXIV as illustrated in example 2, Table B, are synthesised as follows. The synthesis of these compounds is illustrated in Figure 4.

6-oxo-6-(1-piperidinyl)-1,5(S)-hexanediamine (XXII).

The synthesis of this compound started from *N*- α,ϵ -di-*tert*-butyloxycarbonyl-L-lysine according to procedure I. The title compound was obtained by deprotection of the *tert*-butyloxycarbonyl group according to procedure B.

¹H-NMR (D₂O, 400 MHz) δ 1.34-1.87 (m, 12H, CH₂), 2.95 (t, 2H, ϵ -CH₂), 3.43-3.53 (m, 4H, CH₂), 4.50 (t, 1H, α -CH); LC-MS rt 1.0 min, 93%, m/z 214 (M + H)⁺; HPLC (214 nm): rt 2.59 min, 86%.

benzyl 5(S)-amino-6-oxo-6-(1-piperidinyl)hexylcarbamate (XXIII).

The synthesis of this compound started from *N*- α -*tert*-butyloxycarbonyl-*N*- ϵ -benzyloxycarbonyl-L-lysine according to procedure I. The title compound was obtained by deprotection of the *tert*-butyloxycarbonyl group according to procedure B.

¹H-NMR (D₂O, 400 MHz) δ 1.37-1.76 (m, 10H, CH₂), 1.84-1.98 (m, 2H, CH₂), 3.14-3.28 (m, 2H, ϵ -CH₂), 3.41-3.68 (m, 4H, CH₂), 4.47-4.57 (m, 1H, α -CH), 5.11-5.26 (m, 2H, CH₂-Z), 7.49 (s, 5H, H_{arom}); LC-MS rt 18.7 min, 100%, m/z 348 (M + H)⁺; HPLC (214 nm): rt 14.59 min, 100%.

5-oxo-5-(1-piperidinyl)-1,4(S)-pentanediamine (XXIV).

The synthesis of this compound started from *N*- α -benzyloxycarbonyl-*N*- δ -*tert*-butyloxycarbonyl-L-ornithine according to procedure I. The title compound was obtained by deprotection of the *tert*-butyloxycarbonyl group according to procedure D.

¹H-NMR (D₂O, 400 MHz) δ 1.59-1.91 (m, 8H, CH₂), 1.97-2.03 (m, 2H, CH₂), 3.11 (t, 2H, δ -CH₂), 3.53-3.66 (m, 4H, CH₂), 4.66 (t, 1H, α -CH); LC-MS rt 0.8 min, 100%, m/z 200 (M + H)⁺; HPLC (214 nm): rt 3.74 min, 100%.

3-oxo-3-(1-piperidinyl)-1,2(S)-propanediamine (XXV).

The synthesis of this compound started from *N*- α,β -di-*tert*-butyloxycarbonyl-L-2,3-diaminopropanoic acid according to procedure I. The title compound was obtained by deprotection of the *tert*-butyloxycarbonyl group according to procedure B.

¹H-NMR (D₂O, 400 MHz) δ 1.57-1.81 (m, 6H, CH₂), 3.42-3.85 (m, 6H, CH₂, β -CH₂), 4.97 (m, 1H, α -CH); LC-MS rt 0.7 min, 100%, m/z 172 (M + H)⁺; HPLC (214 nm): rt 3.60 min, 100%.

3-(1*H*-imidazol-4-yl)-1-oxo-1-(1-piperidinyl)-2(S)-propanamine (XXVI).

The synthesis of this compound started from *N*- α -*tert*-butyloxycarbonyl-*N*-im-trityl-L-histidine according to procedure I. The title compound was obtained by deprotection of the *tert*-butyloxycarbonyl group according to procedure B.

¹H-NMR (D₂O, 400 MHz) δ 1.52-1.79 (m, 6H, 3-CH₂, 4-CH₂, 5-CH₂), 3.31-3.72 (m, 6H, β -CH₂, 2-CH₂, 6-CH₂), 4.81-4.93 (m, 1H, α -CH), 7.54 (s, 1H, 4-CH-His), 8.81 (s, 1H, 2-CH-His); LC-MS rt 1.0 min, 100%, m/z 223 (M + H)⁺; HPLC (214 nm): rt 4.04 min, 88%.

3-cyclohexyl-1-oxo-1-(1-piperidinyl)-2(S)-propanamine (XXVII)

The synthesis of this compound started from *N*- α -*tert*-butyloxycarbonyl-*L*-cyclohexylalanine according to procedure I. The title compound was obtained by deprotection of the *tert*-butyloxycarbonyl group according to procedure B.

5 ¹H-NMR (D₂O, 400 MHz) δ 0.91-1.79 (m, 19H, CH₂), 3.40-3.53 (m, 4H, 2-CH₂, 6-CH₂), 4.49 (t, 1H, α -CH); MS (ES⁺) *m/z* 239 (M + H)⁺; LC-MS *rt* 1.0-1.4 min, *m/z* 239 (M + H)⁺; UV-HPLC *rt* 23.49 min, 100%.

3-methyl-1-oxo-1-(1-piperidinyl)-2(S)-pentanamine (XXVIII).

10 The synthesis of this compound started from *N*- α -*tert*-butyloxycarbonyl-*L*-isoleucine according to procedure I. The title compound was obtained by deprotection of the *tert*-butyloxycarbonyl group according to procedure B.

¹H-NMR (DMSO-*d*₆, 400 MHz) δ 0.85 (t, 3H, δ -CH₃), 0.94 (d, 3H, γ -CH₃), 1.00-1.25 (m, 1H, γ -CH), 1.35-1.70 (m, 7H, γ -CH, 3-CH₂, 4-CH₂, 5-CH₂), 1.70-1.85 (m, 1H, β -CH), 3.20-3.65 (m, 4H, 2-CH₂, 6-CH₂), 4.25 (d, 1H, α -CH), 8.07 (br s, 3 H, NH₃⁺); MS (ES⁺) *m/z* 199 (M + H)⁺; LC-MS *rt* 0.6-0.7 min, *m/z* 199 (M + H)⁺; UV-HPLC *rt* 11.30 min, 100%.

2(S)-amino-3-oxo-3-(1-piperidinyl)-1-propanol (XXIX).

20 The synthesis of this compound started from *N*- α -*tert*-butyloxycarbonyl-*O*-*tert*-butyl-*L*-serine according to procedure I. The title compound was obtained by deprotection of the *tert*-butyloxycarbonyl group according to procedure B.

¹H-NMR (D₂O, 400 MHz) δ 1.59-1.73 (m, 6H, CH₂), 3.50-3.64 (m, 4H, CH₂), 3.90-3.95 (m, 1H, β -CH₂), 4.02-4.06 (m, 1H, β -CH₂), 4.62-4.68 (m, 1H, α -CH); MS (ES⁺) *m/z* 173 (M + H)⁺; LC-MS *rt* 0.5-0.6 min, *m/z* 173 (M + H)⁺; UV-HPLC *rt* 4.91 min, 93%.

25 **1-oxo-1-(1-piperidinyl)-2(S)-butanamine (XXX).**

The synthesis of this compound started from *N*- α -*tert*-butyloxycarbonyl-*L*-2-aminobutyric acid according to procedure I. The title compound was obtained by deprotection of the *tert*-butyloxycarbonyl group according to procedure B.

30 ¹H-NMR (D₂O, 400 MHz) δ 1.05 (t, 3H, CH₃), 1.63-1.77 (m, 6H, CH₂), 1.89-2.00 (m, 2H, β -CH₂), 3.50-3.68 (m, 4H, CH₂), 4.52 (t, 1H, α -CH); MS (ES⁺) *m/z* 171 (M + H)⁺; LC-MS *rt* 0.5-0.6 min, *m/z* 171 (M + H)⁺; UV-HPLC *rt* 7.92 min, 96%.

1-oxo-1-(1-piperidinyl)-2(S)-pentanamine (XXXI).

The synthesis of this compound started from *N*- α -*tert*-butyloxycarbonyl-*L*-norvaline according to procedure I. The title compound was obtained by deprotection of the *tert*-butyloxycarbonyl group according to procedure B.

¹H-NMR (D₂O, 400 MHz) δ 1.01 (t, 3H, CH₃), 1.41-1.51 (m, 2H, γ -CH₂), 1.59-1.78 (m, 6H, CH₂), 1.85-1.89 (m, 2H, β -CH₂), 3.50-3.68 (m, 4H, CH₂), 4.55 (t, 1H, α -CH); MS (ES⁺) *m/z* 185 (M + H)⁺; LC-MS *rt* 0.7-0.8 min, *m/z* 185 (M + H)⁺; UV-HPLC *rt* 9.91 min, 100%.

1-oxo-1-(1-piperidinyl)-2(S)-hexanamine (XXXII).

The synthesis of this compound started from *N*- α -*tert*-butyloxycarbonyl-*L*-norleucine according to procedure I. The title compound was obtained by deprotection of the *tert*-butyloxycarbonyl group according to procedure B.

¹H-NMR (D₂O, 400 MHz) δ 0.95 (t, 3H, CH₃), 1.30-1.42 (m, 4H, CH₂), 1.59-1.76 (m, 6H, CH₂), 1.87-1.90 (m, 2H, β -CH₂), 3.49-3.69 (m, 4H, CH₂), 4.54 (t, 1H, α -CH); MS (ES⁺) *m/z* 199 (M + H)⁺; LC-MS *rt* 0.5-0.7 min, *m/z* 199 (M + H)⁺; UV-HPLC *rt* 11.96 min, 96%.

15

6-(3,6-dihydro-1(2H)-pyridinyl)-6-oxo-1,5(S)-hexanediamine (XXXIII).

The synthesis of this compound started from *N*- α,ϵ -di-*tert*-butyloxycarbonyl-*L*-lysine according to procedure I using 1,2,3,6-tetrahydropyridine as amine compound. The title compound was obtained by deprotection of the *tert*-butyloxycarbonyl group according to procedure B.

20

¹H-NMR (D₂O, 400 MHz) δ 1.45-1.55 (m, 2H, CH₂), 1.69-1.81 (m, 2H, CH₂), 1.91-2.00 (m, 2H, CH₂), 2.23-2.36 (m, 2H, 5-CH₂), 3.05 (b, 2H, ϵ -CH₂), 3.62-3.81 (m, 2H, 6-CH₂), 4.03-4.17 (m, 2H, 2-CH₂), 4.55 (t, 0.5H, α -CH), 4.62 (t, 0.5H, α -CH), 5.75-5.82 (m, 1H, 4-CH), 5.96-6.06 (m, 1H, 3-CH); MS (ES⁺) *m/z* 212 (M + H)⁺.

25

***N*-[4(S)-amino-5-oxo-5-(1-piperidinyl)pentyl]guanidine (XXXIV).**

The synthesis of this compound started from *N*- α -*tert*-butyloxycarbonyl-*N* γ ,*N* γ -bis-benzyloxycarbonyl-*L*-arginine according to procedure I. Deprotection of the benzyloxycarbonyl groups was done according to procedure E. The title compound was obtained by deprotection of the *tert*-butyloxycarbonyl group according to procedure B.

30

¹H-NMR (D₂O, 400 MHz) δ 1.50-1.80 (m, 8H, CH₂), 1.92-2.00 (m, 2H, CH₂), 3.25-3.38 (m, 2H, δ -CH₂), 3.44-3.77 (m, 4H, CH₂), 4.60-4.70 (m, 1H, α -CH); LC-MS *rt* 1.0 min, 98%, *m/z* 242 (M + H)⁺; HPLC (214 nm): *rt* 4.58 min, 91%.

The compounds having formulas XXXV and XXXVI as illustrated in example 2, Table B, are synthesised as follows. The synthesis of these compounds is illustrated in Figure 5.

5 **1-(S-2,6-Diaminohexanoyl)-2(R,S)-piperidinecarbonitrile (XXXV).**

Procedure K

L-HomoProNH₂ was prepared from *L*-pipecolinic acid (1 eq) by reaction with *N*-hydroxysuccinimide (1.05 eq) and dicyclohexylcarbodiimide (DCC, 1.05 eq) in DCM (yield: 90%), followed by treatment of a solution of the obtained compound in dioxane with ammonium gas (yield: 99%).

The synthesis of the title compound started by coupling *N*- α , γ -di-*tert*-butyloxycarbonyl-*L*-lysine 2-*D,L*-piperidinecarboxamide according to procedure A.

Procedure L

Dehydration of the amide function to the nitrile was done according the following procedure:

15 To a solution of Boc-Xaa-YaaNH₂ (1 eq) and imidazol (2 eq) in pyridine at -30 °C was slowly added phosphorusoxychloride (4 eq). The solution was allowed to attain room temperature and the reaction was monitored by TLC. After completion of the reaction the solvent was evaporated and the residue was extracted with 1N HCl and diethylether. The organic layer was dried, evaporated and the residue was purified by preparative TLC to yield the Boc protected dipeptide nitrile (60%).

20 The title compound was obtained by deprotection of the *tert*-butyloxycarbonyl groups according to procedure B.

¹H-NMR (D₂O, 400 MHz) δ 1.42-1.63 (m, 3H, CH₂), 1.71-2.02 (m, 8H, CH₂), 2.18-2.29 (m, 1H, CH₂), 3.00-3.41 (m, 2H, 6-CH₂), 3.46-3.50 (m, 1H, ϵ -CH₂), 3.88-4.00 (m, 1H, ϵ -CH₂), 4.53-4.67 (m, 1H, α -CH), 5.69-5.88 (m, 1H, 2-CH); LC-MS rt 1.0 min, 100%, m/z 239 (M + H)⁺; HPLC (214 nm): rt 5.78 min, 99%.

1-(S-2,4-diaminobutanoyl)-2(S)-piperidinecarbonitrile (XXXVI).

30 The synthesis of the title compound started by coupling *N*- α , γ -di-*tert*-butyloxycarbonyl-*L*-diaminobutyric acid and 2-*L*-piperidinecarboxamide according to procedure A. Dehydration of the amide function to the nitrile was done according to procedure L. Finally, the title compound was obtained by deprotection of the *tert*-butyloxycarbonyl groups according to procedure B.

¹H-NMR (D₂O, 400 MHz) δ 1.50-1.68 (m, 1H, CH₂), 1.72-2.00 (m, 4H, CH₂), 2.08-2.19 (m, 1H, CH₂), 2.35-2.49 (m, 2H, CH₂), 3.10-3.29 (m, 2H, 6-CH₂), 3.48-3.53 (m, 1H, γ -CH₂), 3.85-3.98 (m, 1H, γ -CH₂), 4.70-4.82 (m, 1H, α -CH), 5.69-5.89 (m, 1H, 2-CH₂); LC-MS rt 0.8 min, 100%, m/z 211 (M + H)⁺; HPLC (214 nm): rt 6.56 min, 100%.

5

The compounds having formulas XXXVI to XXXXI as illustrated in example 2, Table B, are synthesised as follows. The synthesis of these compounds is illustrated in Figure 6.

3-cyclohexyl-1-(1-piperidinyl)-1-thioxo-2(S)-propanamine (XXXVII)

10 procedure M

The protected amino acids amides were produced according to procedure I. To a solution of these compounds (2 eq) in 5 ml of toluene was added 2,4-bis(*p*-methoxyphenyl)-1,3-dithiadiphosphatane 2,4-disulfide (Lawesson's reagent) (1 eq). The reaction mixture was stirred for 2 h at 80°C. The solvent was removed by evaporation and the crude compound

15

was purified by preparative TLC (EtOAc/hexane, 40:60). Finally, the title compound was obtained by deprotection of the *tert*-butoxycarbonyl groups according to procedure B.

¹H-NMR (D₂O, 400 MHz) δ 0.95-2.1 (m, 19H, CH₂, CH), 3.71-3.90 (m, 2H, CH₂), 4.15-4.39 (m, 2H, CH₂), 4.62-4.75 (m, 1H, α -CH); MS (ES⁺) m/z 255 (M + H)⁺.

20

2(S)-methyl-1-(1-piperidinylcarbothioyl)butylamine (XXXVIII)

The synthesis of this compound was started according to procedure M. The title compound was obtained by deprotection of the *tert*-butoxycarbonyl group according to procedure B.

¹H-NMR (D₂O, 400 MHz) δ 0.95-1.08 (m, 6H, CH₃), 1.10-2.12 (m, 9H, CH₂, CH), 3.10-3.26 (m, 1H, CH₂), 3.71-3.95 (m, 2H, CH₂), 4.1-4.21 (m, 1H, CH₂), 4.42-4.50 (m, 0.5H, α -CH), 4.6-4.76 (m, 0.5H, α -CH); MS (ES⁺) m/z 215 (M + H)⁺.

25

4-(1-piperidinyl)-4-thioxo-1,3(S)-butanediamine (XXXIX)

The synthesis of this compound was started according to procedure M. The title compound was obtained by deprotection of the *tert*-butoxycarbonyl group according to procedure B.

30

¹H-NMR (D₂O, 400 MHz) δ 1.61- 1.63 (m, 6H, 3-CH₂, 4-CH₂, 5-CH₂), 2.30-2.35 (m, 2H, β -CH₂), 3.10-3.26 (m, 2H, γ -CH₂), 3.82-3.98 (m, 2H) and 4.12-4.20 (m, 1H) and 4.36-4.44 (m, 1H) (2-CH₂, 6-CH₂), 4.91 (t, 1H, α -CH); MS (ES⁺) m/z 202 (M + H)⁺.

5-(1-piperidinyl)-5-thioxo-1,4(S)-pentanediamine (XXXX)

The synthesis of this compound was started according to procedure M. The title compound was obtained by deprotection of the *tert*-butyloxycarbonyl group according to procedure B.

- 5 ¹H-NMR (D₂O, 400 MHz) δ 1.82-1.99 (m, 8H, CH₂), 2.03-2.09 (m, 2H, β -CH₂), 3.12 (t, 2H, δ -CH₂), 3.89-4.03 (m, 2H, CH₂), 4.20-4.27 (m, 1H, CH₂), 4.42-4.48 (m, 1H, CH₂), 4.90 (t, 1H, α -CH); MS (ES⁺) m/z 216 (M + H)⁺.

6-(1-piperidinyl)-6-thioxo-1,5(S)-hexanediamine (XXXXI)

- 10 The synthesis of this compound was started according to procedure M. The title compound was obtained by deprotection of the *tert*-butyloxycarbonyl group according to procedure B.

- ¹H-NMR (D₂O, 400 MHz) δ 1.43-1.62 (m, 2H) and 1.71-1.83 (m, 8H) (γ -CH₂, δ -CH₂, 3-CH₂, 4-CH₂, 5-CH₂), 1.93-2.00 (m, 2H, β -CH₂), 3.04 (t, 2H, ϵ -CH₂), 3.80-3.96 (m, 2H) and 4.07-4.22 (m, 1H), 4.34-4.41 (m, 1H) (2-CH₂, 6-CH₂), 4.74-4.79 (m, 1H, α -CH); MS (ES⁺) m/z 230 (M + H)⁺.

The compounds having formulas XXXXII to XXXXVII as illustrated in example 2, Table B, are synthesised as follows. The synthesis of these compounds is illustrated in Figure 7.

20 N-cyclohexyl-2-oxo-2-(1-piperidinyl)-ethaneamine (XXXXII)

Cyclohexylamine was protected with a *tert*-butyloxycarbonyl(Boc)-group carrying out procedure H.

Procedure N.

- For the synthesis of *N*-Boc-*N*-cyclohexylglycine ethyl ester, *N*-Boc-Cyclohexylamine (10 mmol) dissolved in freshly dried THF (50ml) was cooled to -78°C under nitrogen. To this solution was dropped *n*-BuLi (11mmol) over a period of 2 minutes. After stirring for 5 minutes, ethyl bromoacetate (11mmol), dissolved in dry ether (5ml) was added in one portion via a syringe and the cooling bath was removed. The solution was allowed to reach room temperature and stirred for another 2 hours. Then, all volatile components were evaporated.
- 30 In this way, the crude product was obtained.

Procedure O

For the synthesis of *N*-Boc-*N*-cyclohexylglycine, the crude product obtained by carrying out procedure N., was mixed with a 1M solution of KOH in aqueous 70% MeOH (12ml). After

stirring for 4 hours at rt, the solvent was evaporated under reduced pressure and the residue redissolved in water (140 ml). The aqueous layer was washed with diethylether (2x50 ml), acidified to pH=1 and extracted with EtOAc (2x50ml). The combined organic layers were dried over MgSO₄ and evaporated under reduced pressure yielding *N*-Boc-*N*-cyclohexylglycine, which was recrystallised from EtOAc/Hexanes (1:4). (72% over three steps).

The *N*-Boc protected title compound was obtained by submitting *N*-Boc-*N*-cyclohexylglycine to procedure A (81%)

10 The title compound was obtained by deprotection with a TFA/DCM mixture (1:1) according to procedure B and precipitation from dry ether.(84%).

¹H-NMR (D₂O, 400MHz) δ1.15-1.31(m, 2H, CH₂(Cy)) 1.34-1.49(m, 4H, CH₂(Cy)) 1.51-1.78(m, 6H, CH₂) 1.81-1.98(m, 2H, CH₂(Cy)) 2.01-2.11(m, 1H, CH₂(Cy)) 2.13-2.25(m, 1H, CH₂(Cy)) 3.01-3.21(m, 1H, CH(Cy)) 3.38-3.47(m, 2H, CH₂) 3.52-3.68(m, 2H, CH₂) 4.06-4.11(s, 2H, CH₂)

25 **Example 4 Use of a compound of the invention as affinity ligand during the purification of DPPII**

This example illustrates the use of a compound (formula XXII) according to the present invention as affinity ligand during the purification of DPPII.

- 30 NHS-activated Sepharose 4 fast flow gel (Amersham) was used as matrix. An appropriate amount of the gel was washed on a sintered glass filter with 1 mM HCl. An excess of Lys-Pip (formula XXII) was solubilized in isopropanol (1 column volume) and allowed to react with the matrix during 24 h at room temperature in an end over end mixer. Afterwards the gel was washed with an excess isopropanol, followed by water. Remaining active groups were

blocked with 2 column volumes of 200 mM Tris-HCl pH 8.0 during 2 hours at room temperature. The additional washing procedure included 3 cycles of alternating pH wash steps. The low pH buffer consisted of 100 mM acetate pH 4.0 containing 500 mM NaCl. The high pH buffer consisted of 50 mM Tris base with 500 mM NaCl. The Lys-Pip affinity matrix was stored in 100 mM cacodylate at 4-8°C.

A biological sample containing DPPII was applied onto the Lys-Pip affinity matrix in Na-acetate buffer, 50 mM pH 5.5. Unbound protein was removed by washing with 100 mM cacodylate pH 5.5. Elution was performed with 100 mM cacodylate pH 5.5 containing 500 mM NaCl.

Example 5

The present example is a further illustration of the present invention.

In a further aspect, the invention relates to the development of highly specific and potent inhibitors of DPP II, which will contribute to the unravelling of the physiological functions of this enzyme and will be helpful to differentiate between DPP II and DPP IV in biological systems. The resembling substrate specificity and catalytic mechanism can complicate this challenging task.

Dipeptidyl peptidases (DPPs, EC 3.4.14.-) have been identified in various mammalian tissues and catalyze the sequential release of dipeptides from polypeptides. Among these enzymes, DPP II (EC 3.4.14.2) and DPP IV (EC 3.4.14.5) preferentially release N-terminal dipeptide moieties (Xaa-Pro- or Xaa-Ala-) at acidic (DPP II) or weak basic (DPP IV) pH from some oligopeptides or proteins. Although DPP IV and DPP II share substrate specificity, they can be functionally and biochemically distinguished.

DPP II, first identified by McDonald et al. (J. Biol. Chem. 1968, 243, 4143-4150), is believed to be involved in the physiological breakdown of some proline-containing neuropeptides and in the degradation of collagen (Andersen, et al. Renal Physiol. Biochem, 1989, 12, 32-40) together with tripeptidyl peptidase. However, its physiological functions remain elusive and potential therapeutic targets of DPP II inhibitors are still unclear. DPP II is generally localized in lysosomes and is found in a number of mammalian tissues and body fluids. Recently it is reported to be identical to human quiescent cell proline dipeptidase (QPP), based on the

significant sequence homology (79.4%) found between human QPP and rat DPP II (Araki et al. *J. Biochem.*, 2001, 129, 279-288). Human QPP, which was recently isolated and cloned from human T cells (Chiravuri et al. *J. Immunol.* 1999, 163, 3092-3099; Underwood et al. *J. Biol. Chem.* 1999, 274, 48, 34053-34058), is a 58-kDa glycoprotein functionally active as a homodimer formed with a leucine zipper motif (Chiravuri et al. *J. Biol. Chem.* 2000, 275, 35, 26994-26999). It has been shown that QPP inhibitors cause apoptosis in quiescent lymphocytes, but not in activated or transformed lymphocytes. This process is believed to be independent of DPP IV, because both DPP IV⁺ and DPP IV⁻ T cells undergo apoptosis (Chiravuri et al. *J. Immunol.* 1999, 163, 3092-3099). No sequence homology has been found between DPP II/QPP and DPP IV.

DPP IV has been studied extensively over the last three decades and a broad array of diverse functional properties in the immune, nerve and endocrine system is suggested (Augustyns et al. *Curr. Med. Chem.*, 1999, 6, 311-327; Villhauer et al. *Annual Reports in Medicinal Chemistry*, Academic Press, 2001, Vol 36, pp 191-200). DPP IV is bound to the cell membrane and expressed quite ubiquitously in mammalian tissues. In the hematopoietic system it was identified as the leukocyte antigen CD26. Inhibition of DPP IV can be valuable in the treatment of type 2 diabetes and some important DPP IV inhibitors are currently under evaluation in this field (Villhauer et al. *Annual Reports in Medicinal Chemistry*, Academic Press, 2001, Vol 36, pp 191-200; Villhauer et al. *J. Med. Chem. Lett.*, 2002). DPP IV inhibitors resemble often the dipeptide cleavage product with a proline mimic at the P₁-site. Amino acyl pyrrolidides (1) and thiazolidides (2) are known as potent, competitive inhibitors of DPP IV (see below). Substituting the pyrrolidine ring with 6- or 7-membered rings or acyclic amines results in loss of potency (Augustyns et al. *Eur. J. Med. Chem.*, 1997, 32, 301-309). Substitution with a nitrile group in 1 or 2 at position 2 and 4 also affords competitive inhibitors with approximately a 1000-fold increase in potency compared to the parent compounds (Ashworth et al. *Bioorg. Med. Chem. Lett.*, 1996, 6, 10, 1163-1166; (1) Li et al. *Arch. Biochem. Biophys.*, 1995, 323, 1, 148-154; Ashworth et al. *Bioorg. Med. Chem. Lett.*, 1996, 6, 22, 2745-2748). Introduction of a thio-amide bond, as a peptide bond surrogate, results in thioxo amino acid pyrrolidides (3) and thiazolidides (4), which are also reported to inhibit DPP IV as well as DPP II Stöckel-Maschek et al. *Biochim. Biophys. Acta*, 2000, 1479, 15-31). The inhibitory potential of all these compounds for DPP IV is well described and recently reviewed (Villhauer et al. *Annual Reports in Medicinal Chemistry*, Academic Press, 2001, Vol 36, pp

191-200; Augustyns et al. Eur. J. Med. Chem., 1997, 32, 301-309). Hereunder Reported DPP II and DPP IV inhibitors are shown.

- Among these classes of inhibitors, some compounds have been reported to have some DPP II inhibitory activity, although with no selectivity with respect to DPP IV (Senten et al. *Biol. Med. Chem. Lett.*, 2002). The boronic acid dipeptide analogue Val-boroPro (5), used to inhibit QPP in the apoptosis studies (Chiravuri et al. *J. Immunol.* 1999, 163, 3092-3099) is in fact a more effective inhibitor for DPP IV (Table 1). Ala-pyrr-2-CN (6) was reported (Li et al. *Arch. Biochem. Biophys.*, 1995, 323, 1, 148-154) as a weak inhibitor for DPP II, but also with higher potency toward DPP IV. Thiazolidines (2) are more effective DPP II inhibitors than the corresponding pyrrolidines (1) (Stöckel-Maschek et al. *Biochim. Biophys. Acta*, 2000, 1479, 15-31). The same argument, however, also serves for DPP IV inhibition. From a series with Ala, Phe, Val, Ile at P₂, Ile-Thia (2, Xaa = Ile) was the most potent DPP IV inhibitor, while Ile-Pyrr (1, Xaa = Ile) is the most selective DPP IV inhibitor with respect to DPP II. Thioxylation of the amide bond (3 and 4) gave different results for DPP II and DPP IV. Thioxylation increased DPP II inhibition up to 10 times, whereas thioamides are 20 times less efficient inhibitors for DPP IV than the corresponding amides (Stöckel-Maschek et al. *Biochim. Biophys. Acta*, 2000, 1479, 15-31). Thioamide analogues such as Ala ψ[CS-N]-Pyrr (3, Xaa = Ala) and Ala ψ[CS-N]-Thia (4, Xaa = Ala) are the only DPP II-DPP IV inhibitors described on this series to have some selectivity towards DPP II (Stöckel-Maschek et al. *Biochim. Biophys. Acta*, 2000, 1479, 15-31).

Incorporation of an electrophilic phosphonate group on the proline mimic at P₁ affords dipeptide proline diphenyl phosphonates, that are well known irreversible inhibitors of DPP IV. Recently, our laboratory reported a series of dipeptide α -aminoalkyl diphenyl phosphonates in which various P₁ diphenyl phosphonate building blocks were combined with commercially available or easily accessible amino acids. These compounds were used for the rapid profiling of DPP II. Most of these dipeptide diphenyl phosphonates gave DPP II inhibition to a moderate or high extent. *N*-cyclopentyl-NH(C₆H₅)PO(OPh)₂ (7) came out as the most selective and potent DPP II inhibitor (Senten et al. J. Comb. Chem., 2003).

Table 1 Inhibitory activity of DPP II inhibitors reported in literature

In this aspect of the invention the systematic search for a potent and selective DPP II inhibitor is reported, the structure-activity relationship of several classes of inhibitors is reported. This aspect aims to identify lead compounds for the further development of highly selective and potent DPP II inhibitors.

Chemistry

Most compounds reported in this example were rapidly prepared by parallel synthesis. Commercially available amino acids with tert-butyloxycarbonyl as α -amino protection and acid-labile side-chain protecting groups were coupled with the appropriate amine using a polymer-assisted solution-phase procedure as reported earlier (Senten et al. Tetrahedron Lett., 2001, 42, 9135-9138). In this two step synthesis we were able to produce a large number of compounds without difficult purification steps. Some compounds, however, were purified before final deprotection by preparative TLC in order to assure the 95% purity needed for biological evaluation. Compounds 4 and 11 were prepared by thioxylation using

Lawesson's reagent after the parallel synthesis of the corresponding protected amides (Stöckel-Mäschek et al. *Biochim. Biophys. Acta*, 2000, 1479, 15-31). Inhibitory activities for DPP IV of pyrrolidide analogues with different ring sizes, open ring structures and other homologues have been reported earlier (Augustyns et al. *Eur. J. Med. Chem.*, 1997, 32, 301-309). These compounds (8) were now also evaluated for their DPP II inhibitory capacity (see formulas below). As standard P₂ amino acid L-Ile was used, although also several analogues were synthesised containing Lys as P₂ amino acid. The substituted pyrrolidides (9) were obtained by coupling of Boc protected amino acid (Ile or Lys) to 3-hydroxyproline. Various reactions at the hydroxyl function and cleavage of the protecting group resulted in the 3-substituted pyrrolidides (9, Table 4) (Augustyns et al. *Eur. J. Med. Chem.*, 1997, 32, 301-309). An azide (9.3, 9.4) was obtained from a tosylate intermediate, prepared with tosylsulphonyl chloride and sodium azide. Treatment with benzoyl chloride afforded the benzoate (9.5, 9.6). Fluorine was introduced with diethylaminosulphur trifluoride (DAST). The synthesis of dipeptide nitriles (14, 15, 16, see formulas below) started by coupling Yaa-NH₂ and the required Boc protected amino acid, followed by dehydration of the amide function to the nitrile using phosphorusoxychloride and subsequent acid catalysed deprotection.

Biochemical evaluation

To establish the most optimal N-terminal amino acid (P₂) for DPP II inhibition, we prepared a series of pyrrolidides (1). IC₅₀ values for DPP II and DPP IV inhibition of compounds 1 are summarized in Table 2. A selectivity index is given as a means to evaluate the selectivity towards DPP IV. Lys-Pyrr (1.8) with an IC₅₀ = 9.9 µM and His-Pyrr (1.6) exhibiting an IC₅₀ = 1.16 µM came out as the most active DPP II inhibitors. These two compounds were also the most selective with respect to DPP IV. From this set of pyrrolidides (1) we can conclude that basic (Lys, 1.8) and neutral amino acids at P₂ are preferable over acidic amino acids. An acidic amino acid at this position seems not to be tolerated (Asp, 1.3), which is in agreement with the reported substrate specificity (Mentlein et al. *J. Neurochem.*, 1989, 52, 1284-1293).

Table 2 Inhibitory activities and selectivity index of pyrrolidides (1)

1.	Xaa	DPP II Inhibition IC ₅₀ (μM)	DPP IV Inhibition IC ₅₀ (μM)	SI ^a

In a quest for the optimal C-terminal residue (P₁-position), we replaced the pyrrolidine ring by several analogues such as pyrroline, thiazolidine, tetrahydropyridine, 4-, 6-, or 7-membered ring structures and acyclic amines, as indicated below.

10

Results are summarized in Table 3. Ile was used as a standard P₂ amino acid. Lys identified as a good P₂ amino acid for more potent and selective DPP II inhibition, was also used in combination with the P₁ building blocks that revealed the most interesting results. The results

of these series 7 must be compared to Ile-Pyr (1.7) (IC_{50} for DPP II = 110 μ M) and Lys-Pyrr (1.8) (IC_{50} for DPP II = 9.9 μ M).

Table 3 Inhibitory activities and selectivity index for the above described compounds in series 8

- Taken the nitrogen out of the ring (8.1) or introducing a pyrroline ring (8.2), results in loss of DPP II as well as of DPP IV inhibition. This decrease in potency is also seen for the open structure pyrrolidides (8.10-8.13) and with introduction of 4- (8.9) or 7-membered (8.7, 8.8) rings. As already pointed out in the introduction thiazolidides have been reported to give an increase of both DPP II and DPP IV inhibition compared to the corresponding pyrrolidides. For the thiazolidides 2.1 and 2.2 the DPP II inhibition is increased with a factor 3 to 4, whereas inhibition of DPP IV increases slightly for Ile (2.1) in P₂, but decreases 8 times for Lys as P₂ amino acid. Lys-Thia (2.2) is 3 times more active DPP II inhibitor (IC_{50} = 3 μ M) and far more selective towards DPP IV (SI = 106) than Lys-Pyrr (1.7). The expected increase of DPP IV inhibition that occurs in general with the replacement of pyrrolidine by thiazolidine is not seen for this compound.
- Replacing the pyrrolidine ring by piperidine in 8.3 and 8.4, we can observe a 2 to 6-fold improvement of the DPP II inhibition. As reported earlier (Augustyns et al. Eur. J. Med. Chem., 1997, 32, 301-309), this introduction of a 6-membered ring gives a serious decrease in potency for DPP IV inhibitors. For DPP II inhibition, however, piperidine seems to be tolerated. Introducing a tetrahydropyridine in the P₁-position decreases as reported (Augustyns et al. Eur. J. Med. Chem., 1997, 32, 301-309) the DPP IV inhibition, but results

only in an improvement of DPP II inhibition for Ile (8.5) as P₂-amino acid, while with Lys (8.6) the DPP II inhibition is only slightly affected.

Lys-Pip (8.4) came out as the most potent DPP II-inhibitor in this series exhibiting an IC₅₀ of 1.6 μM. This compound is also the most selective towards DPP IV with a selectivity index of

5 156.

To further explore the role of the P₁ position, some 3-substituted pyrrolidides (9.1-9.6- see table 4) were evaluated for their DPP II inhibitory potency. A two-fold increase of DPP II inhibition is seen for the azide substituent (9.3 and 9.4). Lys-Pyr-3-N₃ has an IC₅₀ of 4.9 μM and shows good selectivity towards DPP IV. With other substituents, the DPP II as well as the DPP IV inhibition decreases with exception of the fluorine. With this fluorine substituent (9.7), which is considered to be isosteric to a hydrogen, the inhibition of both enzymes is not affected.

Table 4 Inhibitory activities and selectivity index of 3-substituted pyrrolidides (9)

9	Xaa	R	DPP II inhibition IC ₅₀ (μM)	DPP IV inhibition IC ₅₀ (μM)	SI ^a

^aSI = selectivity index = IC₅₀ value for DPP IV divided by IC₅₀ value for DPP II.

20

From these series 8 and 9, it appears that for DPP II inhibition a broader variation in the P₁ position seems to be allowed, while for the inhibition of DPP IV the P₁-building block is restricted to pyrrolidine or thiazolidine. This conclusion can also be drawn from the earlier reported dipeptide α-aminoalkyl diphenyl phosphonates, where a broad set of various of P₁ phosphonate building blocks was introduced (Senten et al. J. Comb. Chem, 2003). Most of these compounds inhibited DPP II to a moderate or high extent, whereas little or no inhibition of DPP IV was observed.

25

Recognizing the importance of the piperidine ring, a broad series of Xaa-piperidides (10) was synthesised. Results are summarized in Table 5. The significance of this piperidine ring is again confirmed: compared to the pyrrolidide series (1), an increase in DPP II inhibition up to 6 times is observed, whereas inhibition of DPP IV decreased simultaneously with a factor between 6 and 17. Therefore, changing pyrrolidine to piperidine results in a considerable increase in potency and selectivity for DPP II. With basic amino acids (Arg (10.1), His (10.3), and Lys (8.4)), high DPP II inhibitory activities are observed.

Table 5 Inhibitory activities and selectivity index of piperidides (10)

^dDap = 2,3-diaminopropionic acid

^eAbu = 2-aminobutyric acid

^fNva = norvaline

^gNle = norleucine

The side chain length ((CH₂)_nNH₂) in Lys-Pip is investigated by replacing the P₂ amino acid lysine (n = 4) (8.4) with respectively ornithine (n = 3) (10.6), 2,4-diaminobutyric acid (n = 2) (10.7) and 2,3-diaminopropionic acid (n = 1) (10.11). Decreasing the side chain length to n = 2 enhanced the DPP II inhibitory potency. Further decrease of the side chain revealed a reduction in potency (10.11, n = 1). Also selectivity was significantly improved since inhibition

of DPP IV declined tremendously with decreasing side chain length. Dab-Pip (10.7) with an $IC_{50} = 0.13 \mu M$ and a selectivity index of more than 7000 is the most active and most selective DPP II inhibitor in this series.

Blocking the side chain amino function in Lys-Pip and Dab-Pip with benzyloxycarbonyl (10.5, 10.9 respectively) afforded for Dab(Z)-Pip (10.9) a decrease in potency up to 9 times, whereas selectivity was reduced here by a factor 17. The significance of this side chain amino function is also revealed in compounds 10.12 to 10.14 where this amino function is omitted: the DPP II inhibition is decreased tremendously and these compounds show no selectivity at all towards DPP IV. The highest potency here is observed with 10.14 ($n = 3$, $IC_{50} = 32.4 \mu M$) and decreases slightly with decreasing chain length $((CH_2)_nCH_3)$. From compounds 10.5, 10.9 and 10.12 to 10.14 we can assume that basic amino acids in P_2 are preferable for DPP II inhibition, but moreover might be necessary to introduce selectivity. With D-Dab-Pip (10.8) the importance of the L-configuration of the P_2 -amino acid for DPP II inhibition is confirmed, like is seen for DPP IV inhibition: a 1000-fold decrease in DPP II inhibitory activity is noticed.

The series of thiazolidides (2) (Table 6) was completed by combining thiazolidine with some interesting P_2 amino acids from the previous series 10. In general, we observe for this Xaa-Thiazolidides compared to the pyrrolidide series (1) an enhancement in DPP II as well as in DPP IV inhibition with the exception of Lys-Thia (2.2) where DPP IV inhibition declined 8 times. Compared to the corresponding piperidides (10), these Xaa-thiazolidides (2) are no better DPP II inhibitors: depending on the P_2 amino acid only a slight decrease or increase of the DPP II inhibition is observed. Selectivity, however, is significantly affected: for all these compounds the selectivity index decreased 2 to 22 times. Thiazolidides (2) are therefore less selective DPP II inhibitors compared to the corresponding piperidides (10).

Table 6 Inhibitory activities and selectivity index of thiazolidides (2)

5

Thioxylation of the amide bond in Lys-thiazolidide leading to 4.1 (Table 6) afforded as expected a higher inhibition of DPP II. However, inhibition of DPP IV increased, which is in contrast with previous reports. Thioamides of some Xaa-piperidides are summarized in Table 7. In this series of Xaa Ψ[CS-N]-piperidides (11) dubious results are seen. Lys Ψ[CS-N]-

10

piperidide (11.5) with an IC₅₀ = 0.49 μM and a selectivity index of more than 2000 is an important progress compared to the corresponding amide Lys-Pip (8.4). We see a 3-fold increase in DPP II inhibitory potency while selectivity is greatly enhanced by a factor 13.

Unfortunately, this increase in DPP II inhibition and selectivity as a result of thioxylation, is not seen with thioxylation of the more potent Dab-Pip (10.7). Dab Ψ[CS-N]-piperidide (11.3) exhibited an IC₅₀ = 0.22 μM and is therefore a less active DPP II inhibitor compared to Dab-Pip (10.7). Selectivity is also declined although a selectivity index of more than 4000 can still be considered high.

30

Having identified Dab-Pip (10.7) as the most potent and selective inhibitor, some analogues were prepared by replacing the piperidine ring with respectively morfoline (12) and piperazine (13) (Table 8). The DPP II inhibitory activity is declined tremendously for Dab-piperazide (13), whereas for Dab-morfolide (12) the DPP II inhibition is decreased with a factor 4 and can still be considered as a potent DPP II inhibitor with a IC₅₀ = 0.51 μM.

^aSI = selectivity index= IC₅₀ value for DPP IV divided by IC₅₀ value for DPP II.

Aminoacylpyrrolidide-2-nitriles are slow-binding, reversible inhibitors of DPP IV with approximately a 1000-fold increase in potency compared to the parent amino acyl pyrrolidides (low nM K_i) and a more than 500-fold selectivity against DPP II (Li et al. Arch. Biochem. Biophys., 1995, 323, 1, 148-154). However, we investigated some dipeptide nitriles (14,15,16) for their DPP II inhibitory activity. The formulas for synthesised dipeptide nitriles (14, 15, 16) are provided below. Based on the frequently used Lys-Ala chromogenic substrate for measurement of DPP II activity, Lys-Ala-CN (14) was prepared. This compound (14) inhibits DPP II to a certain magnitude (IC₅₀ = 84 μM) while a minimal DPP IV inhibition is observed. The cyanopyrrolidide analogue, Lys-Pyr-2-CN (15) inhibited DPP II to a greater extent (IC₅₀ = 1.0 μM), but appeared indeed to be a better inhibitor for DPP IV (IC₅₀ = 0.30 μM). The selectivity could be reversed by replacing the pyrrolidine ring with piperidine. Compared to 15, Lys-Pip-2-CN (16.1) only slightly affect the DPP II inhibition while inhibitory activity of DPP IV declined with a factor 160. Compound 16.1 is therefore a more selective DPP II inhibitor compared to the cyanopyrrolidide analogue (15). However in comparison with Lys-Pip (8.4), no improvement in DPP II inhibitory potency is observed and is accompanied by a 4-fold decrease in selectivity. It must be noticed that for this compound a mixture of diastereomers was tested: the inactive *L*-Lys-Pip-2(*R*)-CN and biological active *L*-Lys-Pip-2(*S*)-CN isomer.

Incorporation of a nitrile in Dab-Pip (10.7) enhanced the inhibition of DPP II with a factor 5. Dab-Pip-2-CN (16.2) exhibited an IC₅₀ = 46 nM and can be regarded as the most active DPP II inhibitor in our investigation. However, for this compound (16.2) the selectivity index declined as well and is therefore less selective with respect to DPP IV compared to Dab-Pip (10.7).

Table 9 Inhibitory activities and selectivity index of dipeptide nitriles (14, 15 and 16).

	DPP II inhibition IC ₅₀ (μM)	DPP IV inhibition IC ₅₀ (μM)	SI ^a
14	84 ± 14	> 500	> 6
15	1.0 ± 0.3	0.32 ± 0.03	0.32
16.1 ^b	1.48 ± 0.09	51.2 ± 1.8	35
16.2 ^c	0.046 ± 0.005	151.9 ± 6.3	3274

^aSI = selectivity index= IC₅₀ value for DPP IV divided by IC₅₀ value for DPP II.^bThe compound tested was L-Lys-Pip-2(R,S)-CN.

15 In conclusion, for DPP IV inhibition a significant increase in potency is seen for the 2-cyanopyrrolidides compared to the corresponding pyrrolidides. However, the increase in DPP II inhibition is not as distinct when going from piperidides to 2-cyanopiperidides. These investigated 2-cyanopiperidides (16.1, 16.2) turned out to be less selective regarding to DPP IV than the parent piperidides.

20 In this example we were able to identify the most optimal N-terminal and C-terminal residue for potent and selective DPP II inhibition. Dab was selected as the most promising N-terminal amino acid with regard to DPP II inhibition and selectivity. The basic side chain amino function was proved to be essential for selective DPP II inhibition. Omitting this function or making it less basic by blocking it, decreased DPP II inhibitory potency and more important, the selectivity was negatively affected. In the quest for the most optimal P₁ building block; piperidine was recognised as being superior over pyrrolidine and thiazolidine. Amino acyl thiazolidides (2) were more or less equipotent as DPP II inhibitors compared to the corresponding piperidides (10), but are regarded as less selective with respect to DPP IV.

30 In this example, we observed that the nature of the P₁ residue is less stringent for DPP II inhibition than it is for DPP IV inhibition. For DPP IV inhibition only pyrrolidide or thiazolidide is tolerated, while a large variety of P₁ building blocks was allowed for DPP II inhibition, blocking this enzyme to a moderate or high extent.

35 Dab-Pip (10.7) has an IC₅₀ = 130 nM and a selectivity index of more than 7000. Incorporation of a nitrile, leading to Dab-Pip-2-CN (16.2), increased potency with a factor 5. However, the

selectivity index of this nitrile compound (16.2) declined to 3000 and is therefore less selective than compound 10.7. Both compounds are the most active and selective DPP II inhibitors reported to date. The high selectivity of these two compounds (10.7 and 16.2) must be emphasised. Val-Pyrr (1), identified as the most selective DPP IV inhibitor, is recently used in animal studies to evaluate the effects of DPP IV inhibitors in the treatment of type II diabetes. However, the IC_{50} value for DPP IV is only 56-fold lower than for DPP II and the selectivity towards DPP II can therefore be regarded as limited. One can argue if its selectivity is sufficient to study the role of DPP IV in biological systems. In this respect the Pro-Pro diaryl phosphonates reported (Belyaev et al. J. Med. Chem., 1999, 42, 1041-1052) by our group, with very low DPP II inhibitory activity, seem a better choice to selectively inhibit DPP IV.

These two compounds (10.7 and 16.2) may offer the opportunity to study the physiological role of DPP II and possible therapeutic benefits of DPP II inhibition. Their high selectivity will enable to differentiate between DPP II and DPP IV in biological systems. Both compounds can also serve as lead compounds for further development of DPP II inhibitors in our laboratory.

According to this example, the structures of the most potent and selective DPP II inhibitors are the following:

10.7 R = H
16.2 R = CN

20

Experimentally, for preparing the compounds represented in this example, parallel synthesis was performed using the Quest 210 Organic Synthesizer (Argonaut Technologies). Boc-protected amino acids, N-cyclohexycarbodiimide, N'-methylpolystyrene resin (PS-carbodiimide) and tris-(2-aminoethyl)-amine polystyrene resin were purchased from Novabiochem. Other reagents were obtained from Sigma-Aldrich or Acros. Compounds 8.1, 8.2, 8.5, 8.7, 8.10-8.13, 9.1, 9.3, 9.5, 9.7 were synthesised as reported earlier (Augustyns et al. Eur. J. Med. Chem., 1997, 32, 301-309).

25

Analysis

- Characterisation of all compounds was done with ^1H -NMR and mass spectrometry. ^1H -NMR were recorded on a Bruker Avance DRX-400 spectrometer (400 MHz). Fast Atom Bombardement (FAB $^+$) mass spectra were obtained on a VG 70-SEQ hybrid mass spectrometer (Micromass, Manchester, UK), equipped with a cesium ion gun. Electrospray (ES $^+$) mass spectra were acquired on a Autospec-ao-TOF mass spectrometer (Micromass, Manchester, UK) or a tripple-quadropole mass spectrometer (Quattro II, Micromass, Manchester, UK) or a Bruker Esquire 3000 plus mass spectrometer. Purity was verified using two diverse HPLC systems using respectively mass and uv-detection. LC-MS were recorded on a Agilent 1100 Series HPLC system using a Discovery Cyano column (2.1 x 50 mm, 5 μm , Supelco, Sigma-Aldrich) coupled with a Bruker Esquire 3000 plus mass spectrometer (0-80% ACN, 22 min, 0.2 ml/min). Reverse phase HPLC was run on a Gilson instrument (Viliers-le-bel, France) equipped with an Ultrasphere ODS column (4.6 x 250 mm, 5 μm , Beckman, Fullerton, CA, USA) and a uv-detector (10-100% ACN, 35 min, 214 nm, 1 ml/min).
- Preparative TLC was performed on Silicagel 60PF₂₅₄ containing gypsum.

Biochemical Evaluation

- DPP IV was purified from human seminal plasma as described previously (De Meester et al. J. Immunol. Methods 1996, 189, 99-105). DPP II was isolated from the same source using techniques described previously for purification of the enzyme from porcine seminal plasma (Huang et al. Biochim. Biophys. Acta 1996, 1290, 149-156), supplemented with adenosine deaminase affinity chromatography to eliminate contaminating DPP IV (De Meester et al. J. Immunol. Methods 1996, 189, 99-105). Enzyme activity was measured kinetically with the chromogenic substrates Gly-Pro-p-nitroanilide at pH 8.3 and Lys-Ala-p-nitroanilide at pH 5.5 for DPP IV and DPP II respectively. Test compounds were dissolved and diluted in DMSO (final concentration DMSO during assay 5% v/v). Highest concentration of compounds tested is 1 mM. IC₅₀ value was defined as the inhibitor concentration, which caused a 50% decrease of the activity under assay conditions.
- General procedure for synthesis of compounds 1, 2, 4, 8.3-8.9, 10, 11, 12 and 13. These series were prepared by parallel synthesis using a PASP-protocol Senten et al. *Tetrahedron Lett.*, 2001, 42, 9135-9138: protected amino acids (0.375 mmol), HOBt (0.425 mmol) and PS-Carbodiimide (0.75 mmol) were added to a dry reaction vessel. Dichloromethane (4 ml) was added and the mixture was stirred for 10 min prior to the addition

of the appropriate amine (respectively pyrrolidine (1), thiazolidine (2, 4), 1,2,5,6-tetrahydropyridine (8.5, 8.6), hexamethyleneimine (8.7, 8.8), azetidine (8.9), piperidine (10, 11), morfoline (12) and Boc-piperazine (13)). After stirring at room temperature overnight the polymer-bound polyamine (1.5 mmol) was added and stirring was continued for 5 h. The reaction mixture was filtered and the amide product was collected in the filtrate. The resins are washed two times with 4 ml of dichloromethane and the combined fractions were evaporated under reduced pressure. The purity of the compounds was checked by TLC and reverse phase HPLC. Compounds were purified by preparative TLC using a mixture of EtOAc and hexane (usually 40/60) as eluent.

10

General procedure for *tert*-butoxycarbonyl (Boc)–deprotection

Deprotection was done by dissolving in 4 ml of a TFA/dichloromethane (1:1) mixture. The solution was stirred for 3 h and the volatile part was removed under reduced pressure. After coevaporating several times with ether, the residues were lyophilised from *tert*-butanol/water

30 ¹H-NMR (D₂O, 400 MHz) δ 0.95 (t, 3H, CH₃), 1.30-1.42 (m, 4H, CH₂), 1.59-1.76 (m, 6H, CH₂), 1.87-1.90 (m, 2H, β -CH₂), 3.49-3.69 (m, 4H, CH₂), 4.54 (t, 1H, α -CH); MS (ES⁺) m/z 199 (M + H)⁺; LC-MS rt 0.5-0.7 min, m/z 199 (M + H)⁺; UV-HPLC rt 11.96 min, 96%.

4-(L-2,4-diaminobutanoyl)morpholine ditrifluoroacetate (12).

¹H-NMR (D₂O, 400 MHz) δ 2.27-2.38 (m, 2H, β -CH₂), 3.12-3.28 (m, 2H, γ -CH₂), 3.61-3.85 (m, 8H, CH₂), 4.71 (t, 1H, α -CH); MS (ES⁺) m/z 188 (M + H)⁺.

1-(L-2,4-diaminobutanoyl)piperazine tris(trifluoroacetate) (13).

¹H-NMR (D₂O, 400 MHz) δ 2.25-2.40 (m, 2H, β -CH₂), 3.12-3.28 (m, 2H, γ -CH₂), 3.33-3.50 (m, 4H, CH₂), 3.75-4.15 (m, 4H, CH₂) 4.76 (t, 1H, α -CH); MS (ES⁺) m/z 187 (M + H)⁺.

General procedure for synthesis of thioamides (4, 11)

The protected amino acids amides (respectively 2 and 10) were prepared by parallel synthesis using the PASP-protocol. Thioxylation of these compounds was performed according to the following procedure: To a solution of the Boc-protected amino acid amides (2 eq) in 5 ml of toluene was added 2,4-bis(*p*-methoxyphenyl)-1,3-dithiadiphosphatane 2,4-disulfide (Lawesson's reagent) (1 eq). The reaction mixture was stirred for 2 h at 80°C. The solvent was removed by evaporation and the crude compound was purified by preparative TLC (EtOAc/hexane, 40:60). Pure compounds were deprotected according to the general procedure.

Lys Ψ[CS-N]-Thia (4.1).

¹H-NMR (D₂O, 400 MHz) δ 1.43-1.80 (m, 4H, CH₂), 1.95-2.07 (m, 2H, CH₂), 3.04-3.34 (m, 4H, ϵ -CH₂, 5-CH₂), 4.00-4.28 (m, 2H, CH₂), 4.57-4.68 (m, 1H, α -CH), 4.80-5.09 (m, 2H, 2-CH₂); MS (ES⁺) m/z 234 (M + H)⁺.

Cha Ψ[CS-N]-Pip (11.1).

¹H-NMR (D₂O, 400 MHz) δ 0.95-2.1 (m, 19H, CH₂, CH), 3.71-3.90 (m, 2H, CH₂), 4.15-4.39 (m, 2H, CH₂), 4.62-4.75 (m, 1H, α -CH); MS (ES⁺) m/z 255 (M + H)⁺.

Ile Ψ[CS-N]-Pip (11.2).

¹H-NMR (D₂O, 400 MHz) δ 0.95-1.08 (m, 6H, CH₃), 1.10-2.12 (m, 9H, CH₂, CH), 3.10-3.26 (m, 1H, CH₂), 3.71-3.95 (m, 2H, CH₂), 4.1-4.21 (m, 1H, CH₂), 4.42-4.50 (m, 0.5H, α -CH), 4.6-4.76 (m, 0.5H, α -CH); MS (ES⁺) m/z 215 (M + H)⁺.

Dab Ψ[CS-N]-Pip (11.3).

¹H-NMR (D₂O, 400 MHz) δ 1.61- 1.63 (m, 6H, 3-CH₂, 4-CH₂, 5-CH₂), 2.30-2.35 (m, 2H, β -CH₂), 3.10-3.26 (m, 2H, γ -CH₂), 3.82-3.98 (m, 2H) and 4.12-4.20 (m, 1H) and 4.36-4.44 (m, 1H) (2-CH₂, 6-CH₂), 4.91 (t, 1H, α -CH); MS (ES⁺) m/z 202 (M + H)⁺.

Orn Ψ[CS-N]-Pip (11.4).

¹H-NMR (D₂O, 400 MHz) δ 1.82-1.99 (m, 8H, CH₂), 2.03-2.09 (m, 2H, β -CH₂), 3.12 (t, 2H, δ -CH₂), 3.89-4.03 (m, 2H, CH₂), 4.20-4.27 (m, 1H, CH₂), 4.42-4.48 (m, 1H, CH₂), 4.90 (t, 1H, α -CH); MS (ES⁺) m/z 216 (M + H)⁺.

Lys Ψ [CS-N]-Pip (11.5).

- 5 ¹H-NMR (D₂O, 400 MHz) δ 1.43-1.62 (m, 2H) and 1.71-1.83 (m, 8H) (γ -CH₂, δ -CH₂, 3-CH₂, 4-CH₂, 5-CH₂), 1.93-2.00 (m, 2H, β -CH₂), 3.04 (t, 2H, ϵ -CH₂), 3.80-3.96 (m, 2H) and 4.07-4.22 (m, 1H), 4.34-4.41 (m, 1H) (2-CH₂, 6-CH₂), 4.74-4.79 (m, 1H, α -CH); MS (ES⁺) m/z 230 (M + H)⁺.

10 3-Substituted pyrrolidine analogues were synthesised from 1-[N-(tert-butyloxycarbonyl)-L-lysyl]-3(R,S)-hydroxy-pyrrolidine.

1-(L-Lysyl)-3(R,S)-hydroxypyrrolidine trifluoroacetate (9.2).

- To a mixture of N-(tert-butyloxycarbonyl)-L-lysine (1.1 eq, 2.28 g), triethylamine (3 eq, 2.53 ml) and TBTU (1.1 eq, 2.12 g) in DMF (40 ml) was added (R,S)-3-hydroxypyrrolidine (1 eq, 522 mg). After stirring at room temperature overnight, water was added and the mixture was extracted with EtOAc (3 x 50 ml). The combined organic layers were washed with 1N HCl (2 x 25 ml), 5% NaHCO₃ (2 x 25 ml) and brine (25 ml). The organic layer was dried over NaSO₄; evaporated and purified by column chromatography yielding 1-[N-(tert-butyloxycarbonyl)-L-lysyl]-3(R,S)-hydroxy-pyrrolidine (87%). This Boc-protected compound was treated with a mixture of TFA/DCM (1/1, 10 ml) at room temperature. The title compound was obtained after evaporation and coevaporation with diethylether.

¹H-NMR (D₂O, 400 MHz) δ 1.48-1.68 (m, 2H, CH₂), 1.71-1.80 (m, 2H, CH₂), 1.93-2.25 (m, 4H, CH₂), 3.06 (br s, 2H, ϵ -CH₂), 3.54-3.88 (m, 4H, CH₂), 4.27-4.42 (m, 1H, α -CH), 4.57-4.66 (m, 1H, 3-CH); MS (ES⁺) m/z 216 (M + H)⁺.

- 25 *1-(L-Lysyl)-3(R,S)-azidopyrrolidine trifluoroacetate (9.4).*

- To a solution of 1-[N-(tert-butyloxycarbonyl)-L-lysyl]-3(R,S)-hydroxypyrrolidine (1.5 mmol, 620 mg) in dry 1,2-dichloroethane (20 ml) was added triethylamine (4.5 mmol, 574 μ l) and p-toluenesulphonyl chloride (2.5 mmol, 457 mg) at 0°C. The mixture was stirred at room temperature for 48 h (after 24 h an second addition of p-toluenesulphonyl chloride (1.5 mmol) occurred). Water (30 ml) was added and the mixture was extracted with CH₂Cl₂ (2 x 80 ml). The organic layer was washed with 5% NaHCO₃ (2 x 50 ml), dried, evaporated and purified by column chromatography (CHCl₃) yielding 1-[N-(tert-butyloxycarbonyl)-L-lysyl]-3(R,S)-azidopyrrolidine (70%). A solution of this compound (0.95 mmol, 540 mg) in DMF (15 ml) was

treated with NaN₃ (4.75 mmol, 390 mg) and stirred at 80 °C for 5 h. EtOAc (50 ml) was added and the resulting mixture was washed with 5% NaCO₃ (2 x 30 ml). The organic layer was dried, evaporated and purified by column chromatography yielding a pale yellow oil. Deprotection was done according to the general procedure to yield the title compound. ¹H-NMR (D₂O, 400 MHz) δ 1.49-1.60 (m, 2H, CH₂), 1.72-1.82 (m, 2H, CH₂), 1.94-2.03 (m, 2H, CH₂), 2.17-2.38 (m, 2H, 4-CH₂), 3.07 (br s, 2H, ε-CH₂), 3.56-3.99 (m, 4H, CH₂), 4.30-4.42 (m, 1H, α-CH), 4.46-4.55 (m, 1H, 3-CH); MS (ES⁺) m/z 241 (M + H)⁺.

1-(L-Lysyl)-3(R,S)-benzoyloxypyrrolidine trifluoroacetate (9.6).

A solution of 1-[N-(tert-butyloxycarbonyl)-L-lysyl]-3(R,S)-hydroxypyrrolidine (1.16 mmol, 480 mg) in dry pyridine (15 ml) was treated with benzoyl chloride (1.28 mol, 148 µl) at 0 °C and stirred for 3 h at room temperature. After cooling the reaction mixture to 0 °C, water was added to the residue and solvents were evaporated. Dichloromethane was added to the residue and the mixture was washed with 5% NaHCO₃. The organic layer was dried, evaporated and purified by preparative TLC using EtOAc as eluent to yield the pure 1-[N-(tert-butyloxycarbonyl)-L-lysyl]-3(R,S)-benzoyloxypyrrolidine as an oil (53%). Deprotection was done according to the general procedure to yield the title compound.

¹H-NMR (D₂O, 400 MHz) δ 1.44-1.60 (m, 2H, CH₂, 4H, CH₂), 2.31-2.52 (m, 2H, CH₂), 2.55-2.70 (m, 0.5H, ε-CH₂), 2.90 (br s, 0.5H, ε-CH₂), 3.08 (br s, 1H, ε-CH₂), 3.72-4.05 (m, 4H, CH₂), 4.34-4.46 (m, 1H, α-CH), 5.62-5.73 (m, 1H, 3-CH), 7.56-7.64 (m, 2H, m-H_{arom}), 7.72-7.81 (m, 1H, p-H_{arom}), 8.05-8.12 (m, 2H, o-H_{arom}); MS (ES⁺) m/z 320 (M + H)⁺.

General procedure for the synthesis of dipeptide nitriles (14, 15 and 16).

To a mixture of Boc-Xaa-OH (1.1 eq), triethylamine (3 eq) and TBTU (1.1 eq) in DMF was added YaaNH₂ (1 eq) (AlaNH₂ and ProNH₂ were commercially available; L-HomoProNH₂ was prepared from L-pipecolic acid (1 eq) by reaction with N-hydroxysuccinimide (1.05 eq) and dicyclohexylcarbodiimide (DCC, 1.05 eq) in DCM (yield: 90%), followed by treatment of a solution in dioxane with ammonium gas (yield: 99%). After stirring overnight at room temperature, water was added and the mixture was extracted with EtOAc (3 x 50 ml). The combined organic layers were washed with 1N HCl (2 x 25 ml), 5% NaHCO₃ (2 x 25 ml) and brine (25 ml). The organic layer was dried over NaSO₄, evaporated and purified by column chromatography yielding of Boc-Xaa-YaaNH₂ (86%). Dehydration of the amide function to the nitrile was done according the following procedure: To a solution of Boc-Xaa-YaaNH₂ (1 eq) and imidazol (2 eq) in pyridine at -30 °C was slowly added phosphorus oxychloride (4 eq).

The solution was allowed to attain room temperature and the reaction was monitored by TLC. After completion of the reaction the solvent was evaporated and the residue was extracted with 1N HCl and diethylether. The organic layer was dried, evaporated and the residue was purified by preparative TLC to yield the Boc protected dipeptide nitrile (60%). Boc deprotection

5 was done according to the general procedure.

2-amino-2-(L-Lysyl)propanenitrile ditrifluoroacetate (14).

¹H-NMR (D₂O, 400 MHz) δ 1.43-1.57 (m, 2H, CH₂), 1.61 (d, 3H, CH₃), 1.69-1.78 (m, 2H, CH₂), 1.91-2.01 (m, 2H, CH₂), 3.03 (t, 2H, ε-CH₂), 4.04 (t, 1H, α-CH), 4.79-4.89 (m, 1H, α-CH); MS (FAB⁺) m/z 199 (M + H)⁺.

10 *1-(L-Lysyl)-2(S)-cyanopyrrolidine ditrifluoroacetate (15).*

¹H-NMR (D₂O, 400 MHz) δ 1.50-1.53 (m, 2H, CH₂), 1.72-1.77 (m, 2H, CH₂), 1.98-2.12 (m, 2H, CH₂), 2.14-2.26 (m, 2H, CH₂), 2.32-2.43 (m, 2H, CH₂), 3.02-3.06 (m, 2H, ε-CH₂), 3.70-3.74 (m, 2H, 5-CH₂), 4.37 (t, 1H, α-CH), 4.83-4.88 (m, 1H, α-CH); MS (FAB⁺) m/z 225 (M + H)⁺.

1-(L-Lysyl)-2(R,S)-cyanopiperidine ditrifluoroacetate (16.1).

15 ¹H-NMR (D₂O, 400 MHz) δ 1.42-1.63 (m, 3H, CH₂), 1.71-2.02 (m, 8H, CH₂), 2.18-2.29 (m, 1H, CH₂), 3.00-3.41 (m, 2H, 6-CH₂), 3.46-3.50 (m, 1H, ε-CH₂), 3.88-4.00 (m, 1H, ε-CH₂), 4.53-4.67 (m, 1H, α-CH), 5.69-5.88 (m, 1H, 2-CH); MS (ES⁺) m/z 239 (M + H)⁺.

1-(L-2,4-Diaminobutanoyl)-2(S)-cyanopiperidine ditrifluoroacetate (16.2).

20 ¹H-NMR (D₂O, 400 MHz) δ 1.50-1.68 (m, 1H, CH₂), 1.72-2.00 (m, 4H, CH₂), 2.08-2.19 (m, 1H, CH₂), 2.35-2.49 (m, 2H, CH₂), 3.10-3.29 (m, 2H, 6-CH₂), 3.48-3.53 (m, 1H, γ-CH₂), 3.85-3.98 (m, 1H, γ-CH₂), 4.70-4.82 (m, 1H, α-CH), 5.69-5.89 (m, 1H, 2-CH₂); MS (ES⁺) m/z 211 (M + H)⁺.

Claims

1. A compound having a modulating activity on a serine type dipeptidyl peptidase and having the general formula I, or pharmaceutically acceptable salts, solvates or functional derivatives thereof,

formula I

- 10 wherein R^1 is selected from the group comprising $-CH_2-$, oxa, thia and imino, or wherein R^1 participates to a double bond between the carbon atoms in position 1 and 2, wherein R^2 is selected from the group comprising hydrogen, alkyl or cyano, wherein R^3 , R^4 and R^5 are selected from the group comprising hydrogen, oxyalkyl, alkyl, alkyloxy, alkyloxyalkyl, alkylthioalkyl, alkylamino, aminoalkyl, alkoxycarbonyl, 15 alkylthiocarbonyl, alkanoyl, aminoalkanoyl, aminocarbonyl, hydroxyalkyl, cycloalkyl, cycloalkylalkyl, cycloalkylcarbonyl, cycloalkylalkanoyl, cycloalkylthiocarbonyl, cycloalkylalkoxycarbonyl, cycloalkylalkoxythiocarbonyl, cycloalkylthioalkyl, alkylcarbonyloxyalkyl, cycloalkylcarbonyloxyalkyl, alkylaminocarbonyl, alkylaminoalkyl, aryl, arylaminoalkoxy, arylamino, aminoaryl, aminoaralkyl, arylaminoalkyl, arylaminoalkylamino, 20 aryloxy, aryloxyalkoxy, aryloxyalkyl, aryloxyalkylamino, aralkyl, aralkoxy, aralkylamino, aralkanoyl, aroyl, arylcarbonyl, aryloxyalkyl, arylthiocarbonyl, aralkoxycarbonyl, arylalkylthiocarbonyl, aryloxyalkyl, arylthioalkyl, haloalkyl, aryloxyalkylalkyl, aryloxyalkanoyle, aralkylcarbonyloxyalkyl, arylaminocarbonyl, aralkylaminocarbonyl, aralkylaminoalkyl, alkanoylaminoalkyl, aroylaminoalkyl, aralkanoylaminoalkyl, alkyloxyalkylaminoalkyl, aryloxyalkylaminoalkyl, aralkoxyalkylaminoalkyl, alkylaminocarbonylaminoalkyl, arylaminocarbonylaminoalkyl, aralkylaminocarbonylaminoalkyl, alkylaminoaryl, arylaminoaryl, aralkylaminoaryl, alkanoylaminoaryl, aroylaminoaryl, aralkanoylaminoaryl, alkyloxyalkylaminoaryl, aryloxyalkylaminoaryl, aralkoxyalkylaminoaryl, alkylaminocarbonylaminoaryl, 25 arylaminocarbonylaminoaryl, aralkylaminocarbonylaminoaryl, alkylaminoaralkyl,

 15 Het²alkylaminocarbonylaminoaralkyl, Het²arylaminocarbonylaminoaralkyl,
 Het²aralkylaminocarbonylaminoaralkyl,
 wherein R³, R⁴ and R⁵ are optionally substituted by one or more substituents
 independently selected from the group comprising hydrogen, amino, hydroxy, halogen, alkyl,
 alkylamino, alkanoyl, hydroxyalkyl, cycloalkyl, cycloalkylalkyl, aryl, aralkyl, aminoaryl,
 20 arylaminoalkyl, arylaminoalkylamino, aralkanoyl, aroyl, piperazinyl, piperidinyl, pyrrolidinyl,
 imidazolidinyl, morpholinyl, amidino, acetyl, Het¹ and Het²;
 wherein R⁶ is oxo or thio, and
 wherein R⁷ is selected from the group comprising hydrogen, alkyl and halogen.

- 25 2. Compound according to claim 1, having the general formula I, or pharmaceutically
 acceptable salts, solvates or functional derivatives thereof,
 wherein R¹ is selected from the group comprising -CH₂-, oxa, thia and imino, or
 wherein R¹ participates to a double bond between the carbon atoms in position 1 and 2,
 wherein R² is selected from the group comprising hydrogen, alkyl or cyano,
 30 wherein R³ and R⁴ are selected from the group comprising hydrogen, alkyl, alkylamino,
 aminoalkyl, aminoalkanoyl, aminocarbonyl, cycloalkyl, alkylaminocarbonyl, alkylaminoalkyl,
 aryl, arylaminoalkoxy, arylamino, aminoaryl, aminoaralkyl, arylaminoalkyl,
 arylaminoalkylamino, aryloxy, aryloxyalkoxy, aryloxyalkyl, aryloxyalkylamino, aralkyl,
 aralkoxy, aralkylamino, aralkanoyl, aroyl, arylcarbonyl, aryloxycarbonyl, arylthiocarbonyl,

- aralkoxycarbonyl, aralkylthiocarbonyl, aryloxyalkyl, arylthioalkyl, haloalkyl, aryloxycarbonylalkyl, aryloxyalkanoyl, aralkylcarbonyloxyalkyl, arylaminocarbonyl, aralkylaminocarbonyl, aralkylaminoalkyl, alkanoylaminoalkyl, aroylaminoalkyl, aralkanoylaminoalkyl, alkylloxycarbonylaminoalkyl, aryloxycarbonylaminoalkyl,
- 5 aralkoxycarbonylaminoalkyl, alkylaminocarbonylaminoalkyl, arylaminocarbonylaminoalkyl, aralkylaminocarbonylaminoalkyl, alkylaminoaryl, arylaminoaryl, aralkylaminoaryl, alkanoylaminoaryl, aroylaminoaryl, aralkanoylaminoaryl, alkylloxycarbonylaminoaryl, aryloxycarbonylaminoaryl, aralkoxycarbonylaminoaryl, alkylaminocarbonylaminoaryl, arylaminocarbonylaminoaryl, aralkylaminocarbonylaminoaryl, alkylaminoaralkyl,
- 10 arylaminoaralkyl, aralkylaminoaralkyl, alkanoylaminoaralkyl, aroylaminoaralkyl, aralkanoylaminoaralkyl, alkylloxycarbonylaminoaralkyl, aryloxycarbonylaminoaralkyl, aralkoxycarbonylaminoaralkyl, alkylaminocarbonylaminoaralkyl, arylaminocarbonylaminoaralkyl, aralkylaminocarbonylaminoaralkyl, carboxyl piperazinyl, piperidinyl, pyrrolidinyl, imidazolidinyl, morpholinyl, amidino, acetyl, guanidinoalkyl,
- 15 amidinoalkyl, Het¹, Het¹oxy, Het¹alkyl, Het¹oxyalkyl, Het¹cycloalkyl, Het¹alkoxycarbonyl, Het¹oxycarbonyl, Het¹alkanoyl, Het¹alkyloxyalkyl, Het¹oxyalkylcarbonyl, Het¹alkyloxyalkylcarbonyl, Het¹aminocarbonyl, Het¹carbonyloxyalkyl, Het¹alkylcarbonyloxyalkyl, Het¹aryl, Het¹arylaminoalkoxy, Het¹arylamino, Het¹arylaminoalkyl, Het¹arylaminoalkylamino, Het¹aryloxy, Het¹aryloxyalkoxy, Het¹aryloxyalkyl,

 20 Het²arylaminocarbonyl aminoaryl, Het²aralkylaminocarbonyl aminoaryl, Het²alkyl aminoaralkyl,
 Het²aryl aminoaralkyl, Het²aralkyl aminoaralkyl, Het²alkanoyl aminoaralkyl,
 Het²aroyl aminoaralkyl, Het²aralkanoyl aminoaralkyl, Het²alkyloxy carbonyl aminoaralkyl,
 Het²aryloxy carbonyl aminoaralkyl, Het²aralkoxycarbonyl aminoaralkyl,
 Het²alkylaminocarbonyl aminoaralkyl, Het²arylaminocarbonyl aminoaralkyl,
 25 Het²aralkylaminocarbonyl aminoaralkyl,
 and wherein R³ and R⁴ are optionally substituted by one or more substituents
 independently selected from the group comprising hydrogen, amino, hydroxy, halogen, alkyl,
 alkylamino, alkanoyl, hydroxyalkyl, cycloalkyl, cycloalkylalkyl, aryl, aralkyl, aminoaryl,
 arylaminoalkyl, arylaminoalkylamino, aralkanoyl, aroyl, piperazinyl, piperidinyl, pyrrolidinyl,
 30 imidazolidinyl, morpholinyl, amidino, acetyl, Het¹ and Het²;
 wherein R⁵ is oxo or thio,
 wherein R⁶ is hydrogen, and
 wherein R⁷ is selected from the group comprising hydrogen, alkyl and halogen

3. Compound according to claim 1 or 2 having the general formula I, or pharmaceutically acceptable salts, solvates or functional derivatives thereof,

wherein R^1 is selected from the group comprising $-CH_2-$, oxa, and thia, or wherein R^1 participates to a double bond between the carbon atoms in position 1 and 2,

5 wherein R^2 is selected from the group comprising hydrogen, alkyl or cyano,

wherein R^3 and R^4 are selected from the group comprising hydrogen, alkyl, alkylamino, aminoalkyl, aminoalkanoyl, aminocarbonyl, cycloalkyl, alkylaminocarbonyl, alkylaminoalkyl, aryl, arylaminoalkoxy, arylamino, aminoaryl, aminoaralkyl, arylaminoalkyl, arylaminoalkylamino, aryloxy, aryloxyalkoxy, aryloxyalkyl, aryloxyalkylamino, aralkyl, aralkoxy, aralkylamino, aralkanoyl, aroyl, arylcarbonyl, aryloxy carbonyl, arylthiocarbonyl, aralkoxycarbonyl, aralkylthiocarbonyl, aryloxyalkyl, arylthioalkyl, haloalkyl, aryloxy carbonylalkyl, aryloxyalkanoyl, aralkylcarbonyloxyalkyl, arylaminocarbonyl, aralkylaminocarbonyl, aralkylaminoalkyl, alkanoylaminoalkyl, aroylaminoalkyl, aralkanoylaminoalkyl, alkyloxy carbonylaminoalkyl, aryloxy carbonylaminoalkyl, aralkoxycarbonylaminoalkyl, alkylaminocarbonylaminoalkyl, arylaminocarbonylaminoalkyl, aralkylaminocarbonylaminoalkyl, alkylaminoaryl, arylaminoaryl, aralkylaminoaryl, alkanoylaminoaryl, aroylaminoaryl, aralkanoylaminoaryl, alkyloxy carbonylaminoaryl, aryloxy carbonylaminoaryl, aralkoxycarbonylaminoaryl, alkylaminocarbonylaminoaryl, arylaminocarbonylaminoaryl, aralkylaminocarbonylaminoaryl, alkylaminoaralkyl, arylaminoaralkyl, aralkylaminoaralkyl, alkanoylaminoaralkyl, aroylaminoaralkyl, aralkanoylaminoaralkyl, alkyloxy carbonylaminoaralkyl, aryloxy carbonylaminoaralkyl, aralkoxycarbonylaminoaralkyl, alkylaminocarbonylaminoaralkyl, arylaminocarbonylaminoaralkyl, aralkylaminocarbonylaminoaralkyl, carboxyl piperazinyl, piperidinyl, pyrrolidinyl, imidazolidinyl, morpholinyl, amidino, acetyl, guanidinoalkyl, amidinoalkyl, Het¹, Het¹oxy, Het¹alkyl, Het¹oxyalkyl, Het¹cycloalkyl, Het¹alkoxycarbonyl, Het¹oxy carbonyl, Het¹alkanoyl, Het¹alkyloxyalkyl, Het¹oxyalkylcarbonyl, Het¹alkyloxyalkylcarbonyl, Het¹aminocarbonyl, Het¹carbonyloxyalkyl, Het¹alkylcarbonyloxyalkyl, Het¹aryl, Het¹arylaminalkoxy, Het¹aryl amino, Het¹aryl aminoalkyl, Het¹aryl aminoalkylamino, Het¹aryloxy, Het¹aryloxyalkoxy, Het¹aryloxyalkyl, Het¹aryloxyalkylamino, Het¹aralkyl, Het¹aralkoxy, Het¹aralkylamino, Het¹aralkanoyl, Het¹aroyl, Het¹arylcarbonyl, Het¹aryloxy carbonyl, Het¹arylthiocarbonyl, Het¹aralkoxycarbonyl, Het¹arylalkylthiocarbonyl, Het¹aryloxyalkyl, Het¹arylthioalkyl, Het¹haloalkyl, Het¹aryloxy carbonylalkyl, Het¹aryloxyalkanoyl, Het¹aralkylcarbonyloxyalkyl, Het¹arylaminocarbonyl, Het¹aralkylaminocarbonyl, Het¹alkylaminoalkyl, Het¹aralkylaminoalkyl,

- Het¹alkanoylaminoalkyl, Het¹aroylaminoalkyl, Het¹aralkanoylaminoalkyl,
 Het¹alkyloxycarbonylaminoalkyl, Het¹aryloxycarbonylaminoalkyl,
 Het¹aralkoxycarbonylaminoalkyl, Het¹alkylaminocarbonylaminoalkyl,
 Het¹arylaminocarbonylaminoalkyl, Het¹aralkylaminocarbonylaminoalkyl, Het¹alkylaminoaryl,
 5 Het¹arylaminooaryl, Het¹aralkylaminooaryl, Het¹alkanoylaminoaryl, Het¹aroylaminoaryl,

 Het²arylaminooaryl, Het²aralkylaminooaryl, Het²alkanoylaminoaryl, Het²aroylaminoaryl,
 Het²aralkanoylaminoaryl, Het²alkyloxycarbonylaminoaryl, Het²aryloxycarbonylaminoaryl,
 Het²aralkoxycarbonylaminoaryl, Het²alkylaminocarbonylaminoaryl,
 30 Het²arylaminocarbonylaminoaryl, Het²aralkylaminocarbonylaminoaryl, Het²alkylaminoaralkyl,
 Het²arylaminoaralkyl, Het²aralkylaminoaralkyl, Het²alkanoylaminoaralkyl,
 Het²aroylaminoaralkyl, Het²aralkanoylaminoaralkyl, Het²alkyloxycarbonylaminoaralkyl,
 Het²aryloxycarbonylaminoaralkyl, Het²aralkoxycarbonylaminoaralkyl,

Het²alkylaminocarbonylaminoaralkyl, Het²arylaminocarbonylaminoaralkyl,
 Het²aralkylaminocarbonylaminoaralkyl,

and wherein R³ and R⁴ are optionally substituted by one or more substituents independently selected from the group comprising hydrogen, amino, hydroxy, halogen, alkyl, alkylamino, alkanoyl, hydroxyalkyl, cycloalkyl, cycloalkylalkyl, aryl, aralkyl, aminoaryl, arylaminoalkyl, arylaminoalkylamino, aralkanoyl, aroyl, piperazinyl, piperidinyl, pyrrolidinyl, imidazolidinyl, morpholinyl, amidino, acetyl, Het¹ and Het²;

wherein R⁵ is oxo or thio, wherein R⁶ is hydrogen, and wherein R⁷ is hydrogen, fluor or methyl.

4. Compound according to any of claims 1 to 3, or pharmaceutically acceptable salts, solvates or functional derivatives thereof,

wherein R¹ is selected from the group comprising -CH₂-, oxa, and thia or wherein R¹ participates to a double bond between the carbon atoms in position 1 and 2,

wherein R² is selected from the group comprising hydrogen and cyano,

wherein R³ and R⁴ are selected from the group comprising hydrogen, alkyl, aryl, cycloalkyl, aralkyl, cycloalkylalkyl, alkylamino, aminoalkyl, aminoalkanoyl, aminocarbonyl, alkylaminocarbonyl, alkylaminoalkyl, arylaminoalkoxy, arylamino, aminoaryl, aminoaralkyl, arylaminoalkyl, arylaminoalkylamino, aryloxyalkylamino, aralkylamino, arylaminocarbonyl, aralkylaminocarbonyl, aralkylaminoalkyl, alkanoylaminoalkyl, aroylaminoalkyl, aralkanoylaminoalkyl, alkyloxycarbonylaminoalkyl, aryloxycarbonylaminoalkyl, aralkoxycarbonylaminoalkyl, alkylaminocarbonylaminoalkyl, arylaminocarbonylaminoalkyl, aralkylaminocarbonylaminoalkyl, alkylaminoaryl, arylaminoaryl, aralkylaminoaryl, alkanoylaminoaryl, aroylaminoaryl, aralkanoylaminoaryl, alkyloxycarbonylaminoaryl, aryloxycarbonylaminoaryl, aralkoxycarbonylaminoaryl, alkylaminocarbonylaminoaryl, arylaminocarbonylaminoaryl, aralkylaminocarbonylaminoaryl, alkylaminoaralkyl, arylaminoaralkyl, aralkylaminoaralkyl, alkanoylaminoaralkyl, aroylaminoaralkyl, aralkanoylaminoaralkyl, alkyloxycarbonylaminoaralkyl, aryloxycarbonylaminoaralkyl, aralkoxycarbonylaminoaralkyl, alkylaminocarbonylaminoaralkyl, arylaminocarbonylaminoaralkyl, aralkylaminocarbonylaminoaralkyl, piperazinyl, piperidinyl, pyrrolidinyl, imidazolidinyl, morpholinyl, amidino, acetyl, guanidinoalkyl, amidinoalkyl

and wherein R³ and R⁴ are optionally substituted by one or more substituents independently selected from the group comprising hydrogen, amino, hydroxy, halogen, alkyl, alkylamino, alkanoyl, hydroxyalkyl, cycloalkyl, cycloalkylalkyl, aryl, aralkyl, aminoaryl,

arylaminoalkyl, arylaminoalkylamino, aralkanoyl, aroyl, piperazinyl, piperidinyl, pyrrolidinyl, imidazolidinyl, morpholinyl, amidino, acetyl, Het¹ and Het²;

wherein R⁵ is oxo or thio, wherein R⁶ is hydrogen, and wherein R⁷ is hydrogen, fluor or methyl.

5

5. Compound according to any of claims 1 to 4, or pharmaceutically acceptable salts, solvates or functional derivatives thereof.

wherein R¹ is selected from the group comprising -CH₂-, oxa, thia

wherein R² is selected from the group comprising hydrogen and cyano,

10

wherein R³ and R⁴ are selected from the group comprising hydrogen, alkyl, aryl, cycloalkyl, aralkyl, cycloalkylalkyl, alkylamino, aminoalkyl, alkylaminoalkyl, arylamino, aminoaryl, aminoaralkyl, arylaminoalkyl, aralkylamino, aralkylaminoalkyl, piperazinyl, piperidinyl, pyrrolidinyl, imidazolidinyl, morpholinyl, amidino, acetyl, guanidinoalkyl, amidinoalkyl

15

and wherein R³ and R⁴ are optionally substituted by one or more substituents independently selected from the group comprising hydrogen, amino, hydroxy, halogen, alkyl, alkylamino, alkanoyl, hydroxyalkyl, cycloalkyl, cycloalkylalkyl, aryl, aralkyl, aminoaryl, arylaminoalkyl, arylaminoalkylamino, aralkanoyl, aroyl, piperazinyl, piperidinyl, pyrrolidinyl, imidazolidinyl, morpholinyl, amidino, acetyl, Het¹ and Het²;

20

wherein R⁵ is oxo or thio, wherein R⁶ is hydrogen, and wherein R⁷ is hydrogen or fluor.

6. Compound according to claim 1, being N¹-benzyl-4-oxo-4-(1-piperidinyl)-1,3(S)-butanediamine as indicated with formula IV according to the specification.

25

7. Compound according to claim 1, being 4-Oxo-4-(1-piperidinyl)-1,3(S)-butanediamine as indicated with formula V according to the specification.

8. Compound according to claim 1, being 4-Oxo-4-(1-piperidinyl)-1,3(R)-butanediamine as indicated with formula VI according to the specification.

30

9. Compound according to claim 1, being 4-(4-morpholinyl)-4-oxo-1,3(S)-butanediamine as indicated with formula VII according to the specification.

10. Compound according to claim 1, being 4-oxo-4-(1-piperazinyl)-1,3(S)-butanediamine as indicated with formula VIII according to the specification.

5 11. Compound according to claim 1, being benzyl 3-amino-1(S)-(1-piperidinylcarbonyl)propylcarbamate as indicated with formula IX according to the specification.

10 12. Compound according to claim 1, being benzyl 3-amino-4-oxo-4-(1-piperidinyl)butylcarbamate as indicated with formula X according to the specification.

13. Compound according to claim 1, being N¹-benzyl-2(S)-(1-piperidinylcarbonyl)-1,4-butanediamine as indicated with formula XI according to the specification.

15 14. Compound according to claim 1, being N-[3(S)-amino-4-oxo-4-(1-piperidinyl)butyl]acetamide as indicated with formula XII according to the specification.

15. Compound according to claim 1, being 4-Oxo-4-(1-piperidinyl)-N¹-(4-piperidinyl)-1,3(S)-butanediamine as indicated with formula XIII according to the specification.

20 16. Compound according to claim 1, being benzyl 4-[(4-amino-2(S)-(1-piperidinylcarbonyl)butyl]amino)-1-piperidinecarboxylate as indicated with formula XIV according to the specification.

25 17. Compound according to claim 1, being N-[3(S)-amino-4-oxo-4-(1-piperidinyl)butyl]guanidine as indicated with formula XV according to the specification.

30 18. Compound according to claim 1, being N-[3-amino-1(S)-(1-piperidinylcarbonyl)propyl]guanidine as indicated with formula XVI according to the specification.

19. Compound according to claim 1, being N-(2-oxo-2-piperidin-1-ylethyl)piperidin-4-amine as indicated with formula XVII according to the specification.

20. Compound according to claim 1, being Benzyl 4[[2-oxo-2-(1-piperidinyl)ethyl]amino]-1-piperidinecarboxylate as indicated with formula XVIII according to the specification.
21. Compound according to claim 1, being *N*-[2-oxo-2-(1-piperidinyl)ethyl]cyclopentanamine as indicated with as indicated with formula XIX according to the specification.
22. Compound according to claim 1, being 1-Benzyl-*N*-[2-oxo-2-(1-piperidinyl)ethyl]-4-piperidinamine as indicated with formula XX according to the specification.
23. Compound according to claim 1, being 4-oxo-4-(1-piperidinyl)-*N*³-(4-piperidinyl)-1,3(*S*)-butanediamine (XXI) as indicated with formula XXI according to the specification.
24. Compound according to claim 1, being 6-oxo-6-(1-piperidinyl)-1,5(*S*)-hexanediamine as indicated with formula XXII according to the specification.
25. Compound according to claim 1, being benzyl 5(*S*)-amino-6-oxo-6-(1-piperidinyl)hexylcarbamate as indicated with formula XXIII according to the specification.
26. Compound according to claim 1, being 5-oxo-5-(1-piperidinyl)-1,4(*S*)-pentanediamine as indicated with formula XXIV according to the specification.
27. Compound according to claim 1, being 3-oxo-3-(1-piperidinyl)-1,2(*S*)-propanediamine as indicated with formula XXV according to the specification.
28. Compound according to claim 1, being 3-(1*H*-imidazol-4-yl)-1-oxo-1-(1-piperidinyl)-2(*S*)-propanamine as indicated with formula XXVI according to the specification.
29. Compound according to claim 1, being 3-cyclohexyl-1-oxo-1-(1-piperidinyl)-2(*S*)-propanamine as indicated with formula XXVII according to the specification.
30. Compound according to claim 1, being 3-methyl-1-oxo-1-(1-piperidinyl)-2(*S*)-pentanamine as indicated with formula XXVIII according to the specification.

31. Compound according to claim 1, being 2(S)-amino-3-oxo-3-(1-piperidinyl)-1-propanol as indicated with formula XXIX according to the specification.
32. Compound according to claim 1, being 1-oxo-1-(1-piperidinyl)-2(S)-butanamine as indicated with formula XXX according to the specification.
33. Compound according to claim 1, being 1-oxo-1-(1-piperidinyl)-2(S)-pentanamine as indicated with formula XXXI according to the specification.
34. Compound according to claim 1, being 1-oxo-1-(1-piperidinyl)-2(S)-hexanamine as indicated with formula XXXII according to the specification.
35. Compound according to claim 1, being 6-(3,6-dihydro-1(2H)-pyridinyl)-6-oxo-1,5(S)-hexanediamine as indicated with formula XXXIII according to the specification.
36. Compound according to claim 1, being N-[4(S)-amino-5-oxo-5-(1-piperidinyl)pentyl]guanidine as indicated with formula XXXIV according to the specification.
37. Compound according to claim 1, being 1-(S-2,6-Diaminohexanoyl)-2(R,S)-piperidinecarbonitrile as indicated with formula XXXV according to the specification.
38. Compound according to claim 1, being 1-(S-2,4-diaminobutanoyl)-2(S)-piperidinecarbonitrile as indicated with formula XXXVI according to the specification.
39. Compound according to claim 1, being 3-cyclohexyl-1-(1-piperidinyl)-1-thioxo-2(S)-propanamine as indicated with formula XXXVII according to the specification.
40. Compound according to claim 1, being 2(S)-methyl-1-(1-piperidinylcarbothioyl)butylamine as indicated with formula XXXVIII according to the specification.
41. Compound according to claim 1, being 4-(1-piperidinyl)-4-thioxo-1,3(S)-butanediamine as indicated with formula XXXIX according to the specification.

42. Compound according to claim 1, being 5-(1-piperidinyl)-5-thioxo-1,4(*S*)-pentanediamine as indicated with formula XXXX according to the specification.
43. Compound according to claim 1, being 6-(1-piperidinyl)-6-thioxo-1,5(*S*)-hexanediamine as indicated with formula XXXXI according to the specification.
44. Compound according to claim 1, being *N*-cyclohexyl-2-oxo-2-(1-piperidinyl)-ethaneamine as indicated with formula XXXXII according to the specification.
- 10 45. Compound according to claim 1, being *N*-benzyl-2-oxo-2-(1-piperidinyl)-ethaneamine as indicated with formula XXXXIII according to the specification.
46. Compound according to claim 1, being as indicated with *N*-piperonyl-2-oxo-2-(1-piperidinyl)-ethaneamine formula XXXXIV according to the specification.
- 15 47. Compound according to claim 1, being *N*-cyclohexyl-2-thioxo-2-(1-piperidinyl)-ethaneamine as indicated with formula XXXXV according to the specification.
48. Compound according to claim 1, being *N*-benzyl-2-thioxo-2-(1-piperidinyl)-ethaneamine as indicated with formula XXXXVI according to the specification.
- 20 49. Compound according to claim 1, being *N*-piperonyl-2-thioxo-2-(1-piperidinyl)-ethaneamine as indicated with formula XXXXVII according to the specification.
- 25 50. Compound having general formula II, or pharmaceutically acceptable salts, solvates or functional derivatives thereof,

formula II

wherein $R_1, R_2, R_3, R_5, R_6, R_7$ have the same meaning as indicated claim 1,

wherein R_4, R_8, R_9, R_{10} are selected from the group comprising nitrogen, hydrogen, oxyalkyl, alkyl, alkyloxy, alkyloxyalkyl, alkylthioalkyl, alkylamino, aminoalkyl, alkoxycarbonyl, alkylthiocarbonyl, alkanoyl, aminoalkanoyl, aminocarbonyl, hydroxyalkyl, cycloalkyl, cycloalkylalkyl, cycloalkylcarbonyl, cycloalkylalkanoyl, cycloalkylthiocarbonyl, cycloalkylalkoxycarbonyl, cycloalkylalkoxythiocarbonyl, cycloalkylthioalkyl, alkylcarbonyloxyalkyl, cycloalkylcarbonyloxyalkyl, alkylaminocarbonyl, alkylaminoalkyl, aryl, arylaminoalkoxy, arylamino, aminoaryl, aminoaralkyl, arylaminoalkyl, arylaminoalkylamino, aryloxy, aryloxyalkoxy, aryloxyalkyl, aryloxyalkylamino, aralkyl, aralkoxy, aralkylamino, aralkanoyl, aroyl, arylcarbonyl, aryloxycarbonyl, arylthiocarbonyl, aralkoxycarbonyl, arylalkylthiocarbonyl, aryloxyalkyl, arylthioalkyl, haloalkyl, aryloxycarbonylalkyl, aryloxyalkanoyl, aralkylcarbonyloxyalkyl, arylaminocarbonyl, aralkylaminocarbonyl, aralkylaminoalkyl, alkanoylaminoalkyl, aroylaminoalkyl, aralkanoylaminoalkyl, alkylloxycarbonylaminoalkyl, aryloxycarbonylaminoalkyl, aralkoxycarbonylaminoalkyl, alkylaminocarbonylaminoalkyl, arylaminocarbonylaminoalkyl, aralkylaminocarbonylaminoalkyl, alkylaminoaryl, arylaminoaryl, aralkylaminoaryl, alkanoylaminoaryl, aroylaminoaryl, aralkanoylaminoaryl, alkylloxycarbonylaminoaryl, aryloxycarbonylaminoaryl, aralkoxycarbonylaminoaryl, alkylaminocarbonylaminoaryl, arylaminocarbonylaminoaryl, aralkylaminocarbonylaminoaryl, alkylaminoaralkyl, arylaminoaralkyl, aralkylaminoaralkyl, alkanoylaminoaralkyl, aroylaminoaralkyl, aralkanoylaminoaralkyl, alkylloxycarbonylaminoaralkyl, aryloxycarbonylaminoaralkyl, aralkoxycarbonylaminoaralkyl, alkylaminocarbonylaminoaralkyl, arylaminocarbonylaminoaralkyl, aralkylaminocarbonylaminoaralkyl, carboxyl piperazinyl, piperidinyl, pyrrolidinyl, imidazolidinyl, morpholinyl, amidino, acetyl, guanidinoalkyl, amidinoalkyl, Het¹, Het¹oxy, Het¹alkyl, Het¹oxyalkyl, Het¹cycloalkyl, Het¹alkoxycarbonyl, Het¹oxycarbonyl, Het¹alkanoyl, Het¹alkyloxyalkyl, Het¹oxyalkylcarbonyl, Het¹alkyloxyalkylcarbonyl, Het¹aminocarbonyl, Het¹carbonyloxyalkyl, Het¹alkylcarbonyloxyalkyl, Het¹aryl, Het¹arylaminalkoxy, Het¹arylmino, Het¹arylminoalkyl, Het¹arylminoalkylamino, Het¹aryloxy, Het¹aryloxyalkoxy, Het¹aryloxyalkyl, Het¹aryloxyalkylamino, Het¹aralkyl, Het¹aralkoxy, Het¹aralkylamino, Het¹aralkanoyl, Het¹aroyl, Het¹arylcarbonyl, Het¹aryloxycarbonyl, Het¹arylthiocarbonyl, Het¹aralkoxycarbonyl, Het¹arylalkylthiocarbonyl, Het¹aryloxyalkyl, Het¹arylthioalkyl, Het¹haloalkyl, Het¹aryloxycarbonylalkyl, Het¹aryloxyalkanoyl, Het¹aralkylcarbonyloxyalkyl, Het¹arylaminocarbonyl, Het¹aralkylaminocarbonyl, Het¹alkylaminoalkyl, Het¹aralkylaminoalkyl,

- Het¹alkanoylaminoalkyl, Het¹aroylaminoalkyl, Het¹aralkanoylaminoalkyl,
 Het¹alkyloxycarbonylaminoalkyl, Het¹aryloxycarbonylaminoalkyl,
 Het¹aralkoxycarbonylaminoalkyl, Het¹alkylaminocarbonylaminoalkyl,
 Het¹arylaminocarbonylaminoalkyl, Het¹aralkylaminocarbonylaminoalkyl, Het¹alkylaminoaryl,
 5 Het¹arylaminooaryl, Het¹aralkylaminooaryl, Het¹alkanoylaminoaryl, Het¹aroylaminoaryl,
 Het¹aralkanoylaminoaryl, Het¹alkyloxycarbonylaminoaryl, Het¹aryloxycarbonylaminoaryl,
 Het¹aralkoxycarbonylaminoaryl, Het¹alkylaminocarbonylaminoaryl,
 Het¹arylaminocarbonylaminoaryl, Het¹aralkylaminocarbonylaminoaryl, Het¹alkylaminoaralkyl,
 Het¹arylaminoaralkyl, Het¹aralkylaminoaralkyl, Het¹alkanoylaminoaralkyl,
 10 Het¹aroylaminoaralkyl, Het¹aralkanoylaminoaralkyl, Het¹alkyloxycarbonylaminoaralkyl,
 Het¹aryloxycarbonylaminoaralkyl, Het¹aralkoxycarbonylaminoaralkyl,
 Het¹alkylaminocarbonylaminoaralkyl, Het¹arylaminocarbonylaminoaralkyl,
 Het¹aralkylaminocarbonylaminoaralkyl, Het², Het²oxy, Het²alkyl, Het²oxyalkyl, Het²cycloalkyl,
 Het²alkoxycarbonyl, Het²oxycarbonyl, Het²alkanoyl, Het²alkyloxyalkyl, Het²oxyalkylcarbonyl,
 15 Het²alkyloxyalkylcarbonyl, Het²aminocarbonyl, Het²carbonyloxyalkyl,
 Het²alkylcarbonyloxyalkyl, Het²aryl, Het²arylaminoalkoxy, Het²arylamino, Het²arylaminoalkyl,
 Het²arylaminoalkylamino, Het²aryloxy, Het²aryloxyalkoxy, Het²aryloxyalkyl,
 Het²aryloxyalkylamino, Het²aralkyl, Het²aralkoxy, Het²aralkylamino, Het²aralkanoyl, Het²aroyl,
 Het²arylcarbonyl, Het²aryloxycarbonyl, Het²arylthiocarbonyl, Het²aralkoxycarbonyl,
 20 Het²arylalkylthiocarbonyl, Het²aryloxyalkyl, Het²arylthioalkyl, Het²haloalkyl,
 Het²aryloxycarbonylalkyl, Het²aryloxyalkanoyl, Het²aralkylcarbonyloxyalkyl,
 Het²arylaminocarbonyl, Het²aralkylaminocarbonyl, Het²alkylaminoalkyl, Het²aralkylaminoalkyl,
 Het²alkanoylaminoalkyl, Het²aroylaminoalkyl, Het²aralkanoylaminoalkyl,
 Het²alkyloxycarbonylaminoalkyl, Het²aryloxycarbonylaminoalkyl,
 25 Het²aralkoxycarbonylaminoalkyl, Het²alkylaminocarbonylaminoalkyl,
 Het²arylaminocarbonylaminoalkyl, Het²aralkylaminocarbonylaminoalkyl, Het²alkylaminoaryl,
 Het²arylaminooaryl, Het²aralkylaminooaryl, Het²alkanoylaminoaryl, Het²aroylaminoaryl,
 Het²aralkanoylaminoaryl, Het²alkyloxycarbonylaminoaryl, Het²aryloxycarbonylaminoaryl,
 Het²aralkoxycarbonylaminoaryl, Het²alkylaminocarbonylaminoaryl,
 30 Het²arylaminocarbonylaminoaryl, Het²aralkylaminocarbonylaminoaryl, Het²alkylaminoaralkyl,
 Het²arylaminoaralkyl, Het²aralkylaminoaralkyl, Het²alkanoylaminoaralkyl,
 Het²aroylaminoaralkyl, Het²aralkanoylaminoaralkyl, Het²alkyloxycarbonylaminoaralkyl,
 Het²aryloxycarbonylaminoaralkyl, Het²aralkoxycarbonylaminoaralkyl,

Het²alkylaminocarbonylaminoaralkyl, Het²arylaminocarbonylaminoaralkyl,
Het²aralkylaminocarbonylaminoaralkyl,

and wherein R₄, R₈, R₉, R₁₀ are optionally substituted by one or more substituents independently selected from the group comprising hydrogen, amino, hydroxy, halogen, alkyl, 5 alkylamino, alkanoyl, hydroxyalkyl, cycloalkyl, cycloalkylalkyl, aryl, aralkyl, aminoaryl, arylaminoalkyl, arylaminoalkylamino, aralkanoyl, aroyl, piperazinyl, piperidinyl, pyrrolidinyl, imidazolidinyl, morpholinyl, amidino, acetyl, Het¹ and Het².

- 10 51. Compounds of the invention having general formula II as represented in Table A.
52. Compound according to any of claims 1 to 51 for use as a medicament.
- 15 53. Compound according to any of claims 1 to 51 for use in the treatment of diseases associated with excessive, impaired or unbalanced activity of a serine type dipeptidyl peptidase.
54. Compound according to any of claims 1 to 51 for use in the treatment of diseases associated with excessive, impaired or unbalanced activity of DPPiV.
- 20 55. Compound according to any of claims 1 to 51 for use in the treatment of diseases associated with excessive, impaired or unbalanced activity of DPPiI.
- 25 56. Compound according to any of claims 1 to 51 for use in diagnostic and research methods such as fluorescence, purification and radio-assays, Imaging, *in situ* histochemical and cytochemical staining.
57. Use of a compound according to any of claims 1 to 51 in the preparation of a medicament for inhibiting the activity of a serine type dipeptidyl peptidase.
- 30 58. Use of a compound according to any of claims 1 to 51 in the preparation of a medicament for inhibiting the activity of DPPiV.
59. Use of a compound according to any of claims 1 to 51 in the preparation of a medicament for inhibiting the activity of DPPiI.

60. Use of a compound according to any of claims 1 to 51 in the preparation of a medicament for treating diseases associated with excessive, impaired or unbalanced activity of a serine type dipeptidyl peptidase.
- 5
61. Use of a compound according to any of claims 1 to 51 in the preparation of a medicament for treating diseases associated with excessive, impaired or unbalanced activity of DPPIV.
62. Use of a compound according to any of claims 1 to 51 in the preparation of a medicament
- 10 for treating diseases associated with excessive, impaired or unbalanced activity of DPPII.
63. Pharmaceutical composition comprising a therapeutically effective amount of one or more compounds according to any of claims 1 to 51, and a pharmaceutically acceptable excipient.

INTEI TIONAL SEARCH REPORT

International Application No. PCT/18 03/00792

A. CLASSIFICATION OF SUBJECT MATTER IPC 7 C07D295/18 C07D233/54 C07D317/58 A61K31/4453		
According to International Patent Classification (IPC) or to both national classification and IPC		
B. FIELDS SEARCHED Minimum documentation searched (classification system followed by classification symbols) IPC 7 C07D A61K		
Documentation searched other than minimum documentation to the extent that such documents are included in the fields searched		
Electronic data base consulted during the international search (name of data base and, where practical, search terms used) EPO-Internal, WPI Data, CHEM ABS Data, BEILSTEIN Data, PAJ		
C. DOCUMENTS CONSIDERED TO BE RELEVANT		
Category *	Citation of document, with indication, where appropriate, of the relevant passages	Relevant to claim No.
X	K SENTEN ET AL: "DEVELOPMENT OF POTENT AN DSELECTIVE DIPEPTIDYL PEPTIDASE II INHIBITORS" BIOORGANIC & MEDICIAL CHEMISTRY LETTERS, vol. 12, 2002, pages 2825-2828, XP002258184 see whole document, especially examples 18-25	1-5, 7, 24-30, 50-63

FURTHER INFORMATION CONTINUED FROM PCT/ISA/ 210

Continuation of Box I.2

Claims Nos.: 1-5,50-63 (part)

Present claims 1-5,50-63 (part) relate to an extremely large number of possible compounds. Support within the meaning of Article 6 PCT and/or, disclosure within the meaning of Article 5 PCT is to be found, however, for only a very small proportion of the compounds/products/apparatus/methods claimed. In the present case, the claims so lack support, and the application so lacks disclosure, that a meaningful search over the whole of the claimed scope is impossible. Consequently, the search has been carried out for those parts of the claims which appear to be supported and disclosed, namely those parts relating to the compounds of claims 6-49.

The applicant's attention is drawn to the fact that claims, or parts of claims, relating to inventions in respect of which no international search report has been established need not be the subject of an international preliminary examination (Rule 66.1(e) PCT). The applicant is advised that the EPO policy when acting as an International Preliminary Examining Authority is normally not to carry out a preliminary examination on matter which has not been searched. This is the case irrespective of whether or not the claims are amended following receipt of the search report or during any Chapter II procedure.

INTERNATIONAL SEARCH REPORT

International application No.
PCT/IB 03/00792

Box I Observations where certain claims were found unsearchable (Continuation of item 1 of first sheet)

This International Search Report has not been established in respect of certain claims under Article 17(2)(a) for the following reasons:

1. ☐ Claims Nos.:
because they relate to subject matter not required to be searched by this Authority, namely:
2. ☒ Claims Nos.: 1-5,50-63 (part)
because they relate to parts of the International Application that do not comply with the prescribed requirements to such an extent that no meaningful International Search can be carried out, specifically:
see FURTHER INFORMATION sheet PCT/ISA/210
3. ☐ Claims Nos.:
because they are dependent claims and are not drafted in accordance with the second and third sentences of Rule 6.4(a).

Box II Observations where unity of invention is lacking (Continuation of item 2 of first sheet)

This International Searching Authority found multiple inventions in this international application, as follows:

1. ☐ As all required additional search fees were timely paid by the applicant, this International Search Report covers all searchable claims.
2. ☐ As all searchable claims could be searched without effort justifying an additional fee, this Authority did not invite payment of any additional fee.
3. ☒ As only some of the required additional search fees were timely paid by the applicant, this International Search Report covers only those claims for which fees were paid, specifically claims Nos.:
4. ☐ No required additional search fees were timely paid by the applicant. Consequently, this International Search Report is restricted to the invention first mentioned in the claims; it is covered by claims Nos.:

Remark on Protest

- ☐ The additional search fees were accompanied by the applicant's protest.
- ☐ No protest accompanied the payment of additional search fees.
